<b>Subject:</b>	Determination of a JI Project			
<b>Executing Operational Unit:</b>	TÜV SÜD Industrie Service GmbH Carbon Management Service Westendstr. 199 – 80686 Munich - GERMANY			
<b>Client:</b>	Kommunalkredit Public Consulting GmbH Türkenstrasse 9 A1090, Vienna, Austria			
<b>Contract approved by:</b>	Werner Betzenbichler			
<b>Report Title:</b>	Determination of the JI-Project: “Jägala-Joa Hydropower Joint Implementation Project, Estonia”			
<b>Number of pages</b>	17 (excluding cover page and annexes)			
<b>Summary:</b>				
<p>The Certification Body “Climate and Energy” of TÜV SÜD Industrie Service GmbH has been ordered by the LHCarbon OÜ in Tallin, Estonia, to determine the above mentioned JI project.</p> <p>The determination of this project has been performed by document reviews, an audit at the location of the project and interviews at the offices of the project owner and its technical advisor.</p> <p>The need for corrective action request (CAR) and clarification requests (CR) is described in the attached determination protocol. During the determination all issues indicated in CARs and CRs are considered to be resolved.</p> <p>As result of this procedure, it can be confirmed that the submitted project documentation is in line with all requirements set by the Marrakech Accords and the Kyoto Protocol.</p> <p>Additionally the assessment team reviewed the estimation of the projected emission reductions.</p> <p>We can confirm that the indicated amount of 36.945 tons CO<sub>2</sub> (ERUs) during the Kyoto crediting period from November 1<sup>st</sup>, 2008 – December 31<sup>st</sup>, 2012 represents a conservative estimation using the assumptions given by the project documents.</p>

Appendix A: Determination Protocol

Appendix B: Information Reference List

## **1 INTRODUCTION**

### **1.1 Objective**

LHCarbon OÜ in Tallin, Estonia has commissioned TÜV SÜD Industrie Service (in short: TÜV SÜD) to make a determination of the **“Jägala-Joa Hydropower Joint Implementation Project”** (in short: Jägala-Joa HPP) with regard to the relevant requirements for JI project activities. The determination serves as a design verification and is a requirement for all JI projects submitted to the JISC. The purpose of a determination is to have an independent third party assess the project design. In particular, the project's baseline, the monitoring plan (MP), and the project's compliance with relevant UNFCCC and host country criteria are validated in order to confirm that the project design as documented is sound and reasonable and meets the stated requirements and identified criteria. Determination is seen as necessary to provide assurance to stakeholders of the quality of the project and its intended generation of emission reduction units (ERUs).

UNFCCC criteria refer to the Kyoto Protocol Article 6 criteria and the Guidelines for the implementation of Article 6 of the Kyoto Protocol as agreed in the Marrakech Accords.

### **1.2 Scope**

The determination scope is defined as an independent and objective review of the project design document (PDD), the project's baseline study and monitoring plan and other relevant documents. The information in these documents is reviewed against Kyoto Protocol requirements, UNFCCC rules and associated interpretations. TÜV SÜD has employed a risk-based approach in the determination, focusing on the identification of significant risks for project implementation and the generation of ERUs.

The determination is not meant to provide any consulting towards the project owner Jägala Energy OÜ or the compiler of project design documents LHCarbon OÜ. However, stated requests for clarifications and/or corrective actions may provide input for improvement of the project design.

### **1.3 GHG Project Description**

The project foresees the restoration of a small hydropower plant in Estonia by the River Jägala at the municipality of Jõelähtme, approximately 25 km to east from Estonian capital Tallinn. The hydropower plant will have a total capacity of ca 1978 kW (two turbines of nominal capacity of 800 kW and one turbine of capacity 378 kW, of type “GHE Francis-Spiral Turbine”) and the expected net output 7,900 MWh per year will be feeded into the Estonian national grid. The project qualifies as the JI-project as the renewable electricity produced by the Jägala-Joa hydropower plant will displace carbon intensive electricity produced from fossil fuel sources in the Estonian grid.

Jägala-Joa HPP will be commissioned by October 2008. The first turbine will be installed for electricity generation by August 2008. The generated ERUs are supplied by Jägala-Joa Energy OÜ, an Estonian private hydropower development company. The project documentation has been compiled by the project proponent, LHCarbon OÜ, located in Tallinn, Estonia, with additional support from other institutions.

## **2 METHODOLOGY**

In order to ensure transparency, a determination protocol was customised for the project. The protocol shows, in a transparent manner, criteria (requirements), means of verification and the results from validating the identified criteria. The determination protocol serves the following purposes:

- It organises, details and clarifies the requirements a JI project is expected to meet;
- It ensures a transparent determination process where TÜV SÜD has documented how a particular requirement has been validated and the result of the determination.

The determination protocol for this project consists of three tables. The different columns in these tables are described in Figure 1.

The completed determination protocol is enclosed in Appendix A to this report.

<b>Determination Protocol Table 1: Mandatory Requirements</b>			
<b>Requirement</b>	<b>Reference</b>	<b>Conclusion</b>	<b>Cross reference</b>
<i>The requirements the project must meet.</i>	<i>Gives reference to the legislation or agreement where the requirement is found.</i>	<i>This is either acceptable based on evidence provided (OK), or a <b>Corrective Action Request (CAR)</b> of risk or non-compliance with stated requirements. The corrective action requests are numbered and presented to the client in the determination report. <b>O</b> is used in case of an outstanding, currently not solvable issue, <b>AI</b> means Additional Information is required.</i>	<i>Used to refer to the relevant checklist questions in Table 2 to show how the specific requirement is validated. This is to ensure a transparent determination process.</i>

<b>Determination Protocol Table 2: Requirement checklist</b>				
<b>Checklist Question</b>	<b>Reference</b>	<b>Means of verification (MoV)</b>	<b>Comment</b>	<b>Draft and/or Final Conclusion</b>
<i>The various requirements in Table 1 are linked to checklist questions the project should meet. The checklist is organised in six different sections. Each section is then further subdivided. The lowest level constitutes a checklist question.</i>	<i>Gives reference to documents where the answer to the checklist question or item is found.</i>	<i>Explains how conformance with the checklist question is investigated. Examples of means of verification are document review (DR) or interview (I). N/A means not applicable.</i>	<i>The section is used to elaborate and discuss the checklist question and/or the conformance to the question. It is further used to explain the conclusions reached.</i>	<i>This is either acceptable based on evidence provided (OK), or a <b>Corrective Action Request (CAR)</b> due to non-compliance with the checklist question (See below). <b>Clarification</b> or <b>Additional Information</b> is used when the independent entity has identified a need for further clarification or more information.</i>

<b>Determination Protocol Table 3: Resolution of Corrective Action and Clarification Requests</b>			
<b>Draft report clarifications and corrective action and additional Information requests</b>	<b>Ref. to checklist question in table 2</b>	<b>Summary of project owner response</b>	<b>Determination conclusion</b>
<i>If the conclusions from the draft determination are either a Corrective Action Request or a Clarification or Additional Information Request, these should be listed in this section.</i>	<i>Reference to the checklist question number in Table 2 where the Corrective Action Request or Clarification or Additional Information Request is explained.</i>	<i>The responses given by the Client or other project participants during the communications with the independent entity should be summarised in this section.</i>	<i>This section should summarise the independent entity’s responses and final conclusions. The conclusions should also be included in Table 2, under “Final Conclusion”.</i>

Figure 1 Determination protocol tables

## 2.1 Review of Documents

A first PDD (Version 1 – 29.November 2006) were submitted to TÜV SÜD by LHCarbon OÜ on 29.11.2006. The second PDD (Version 2 – 22.May 2007) were submitted on 23.05.2007. The third PDD (Version 3 – 25.May 2007) were submitted on 30.05.2007 for publishing on the TÜV SÜD website [www.netinform.net](http://www.netinform.net) and on JISC-website. The publishing on JISC-website was confirmed on 04.06.2007.

As a result of the elaborations based to the corrective action and clarification requests the PDD was revised again (version 4, 27.September 2007) and sent to TÜV SÜD on September 27, 2007. After given comments from TÜV SÜD a renewed PDD-version (version 5, Dec 4, 2007, JI PDD Jägala-Joa Hydropower 04.12.07.doc) was provided, which served as the basis of this determination report.

## 2.2 Follow-up Interviews

On December 6, 2006 TÜV SÜD performed an on-site visit and interviews with project stakeholders to confirm selected information and to resolve issues identified in the initial document review. Representatives of the project proponent LHCarbon OÜ and the owner and developer Jägala Energy OÜ have been interviewed.

The main topics of the interviews are summarised in Table 1. The complete and detailed list of all persons interviewed and documents revised are enclosed in Appendix B to this report.

**Table 1: Interview topics**

Interviewed organisation	Interview topics
Jägala Energy OÜ	Project design and technological possibilities, monitoring plan, stakeholder comments, monitoring procedures, measurement equipment, documentation, archiving of data
LHCarbon	Project design, baseline, monitoring plan and procedures, environmental impacts, stakeholder comments, additionality, business plan

## **2.3 Resolution of Clarification and Corrective Action Requests**

The objective of this phase of the determination is to resolve the requests for corrective actions and clarification and any other outstanding issues which need to be clarified for TÜV SÜD's positive conclusion on the project design.

Most findings and comments during the follow-on interviews were immediately resolved. Still a determination protocol was sent to LHCarbon with 29 CARs and 5 CRs. The most of the CARs and CRs were resolved by changes in the PDD version 3 (May 25 2007). The CAR#2 regarding the time schedule, CAR#4 regarding the status of EIA, CAR#7 regarding the technology, CAR#24 regarding the transboundary impacts, CAR #25 regarding the Letter of Endorsement, CAR #26, regarding the evidence about the announcements in media and public hearing undertakings and CR#1, why do the Jägala HPP need JI-support in comparison to the other restored HPPs, were resolved by additional information and adjustments finally in the PDD version 4 (September 27, 2007).

To guarantee the transparency of the determination process, the concerns raised and the responses given are summarised in chapter 3 below. The whole process is documented in more detail in the determination protocol in Appendix A.

### **3 DETERMINATION FINDINGS**

In the following sections the findings of the determination are stated. The determination findings for each determination subject are presented as follows:

- 1) The findings from the review of the PDD (version 1 – 29.November 2006) and the findings from interviews during the follow up visit are summarised. A more detailed record of these findings can be found in the Determination Protocol in Appendix A.
- 2) Where TÜV SÜD had identified issues that needed clarification or that represented a risk to the fulfilment of the project objectives, a Clarification or Corrective Action Request, respectively, has been issued. The Clarification, Corrective Action Requests and Additional Information Requests are stated, where applicable, in the following sections and are further documented in the Determination Protocol in Appendix A.
- 3) Where Clarification Requests and Additional Information Requests have been issued, the exchanges with LHCarbon to resolve these Clarification and Additional Information Requests will be summarized in the determination report.
- 4) The conclusions of the determination are presented consecutively.

#### **3.1 Project Design**

##### **3.1.1 Findings**

The project foresees the restoration of a small hydropower plant in Estonia by the River Jägala at the municipality of Jõelähtme, approximately 25 km to east from Estonian capital Tallinn. Jägala Energy OÜ has decided to construct the hydropower plant in accordance with the already issued special water use permit, which allows to have a total capacity of ca 1978 kW (two turbines of nominal capacity of 800 kW and one turbine of capacity 378 kW, of type “GHE Francis-Spiral Turbine”) and the expected net output 7,900 MWh per year and it would be the largest hydropower plant in Estonia when realized.

The plant was originally established in 1917 and closed for operation in 1970. The dam is located on the Jägala River within 850 metres of the hydropower plant. The dam is 94 m in length, is made of stone, concrete and metal. The dam is built on a limestone terrace; it makes the restoration and reconstruction of the present building significantly more simple. The derivation channel, with a length of 850 m and width of 7 m on average, a height of walls of 2.2 m on average, is a facility of concrete and limestone, whose technical condition is varying. The channel does not need a capital reconstruction and reinforcement.

The net head of the power plant is 17.4 m and the rated maximum flow of all turbines is 13.1 m<sup>3</sup>/s.

The final implementation schedule is realistic. Works for repair of the derivation channel and restoration of the upstream dam are already ongoing and Jägala Energy OÜ has in September 2007 executed an agreement with Austrian company Global Hydro Energy GmbH for turn-key installation of the hydropower plant equipment. There are planned to use modern state-of-the-art turbines and other equipment (generators, actuators, control system etc) and meet the “best available technology” criteria as defined in Estonia’s BAT regulation. The technology supplier will also take care of supervision of installation and commissioning of the delivered equipment.

The management of Jägala Energy OÜ have gained earlier experience of in restoration of hydropower stations in Estonia and Latvia.

The main reconstruction and construction works are planned during May-July 2008, which allows carrying out installation of the technological equipment in July-October 2008 and commissioning of the plant by October 2008. Emission reductions would thus begin to be generated from 1st of November 2008. The operational lifetime of the project is mentioned with 20 years and this is in accordance with international practice.

The technical design and capacity of the plant is limited due to the water use limitations, which is set up in the special water use permit issued by Harju County Environmental Service. According to the permit it is required to keep sanitary minimum water flow 1,5 m<sup>3</sup>/s in river and during the summer season from May 1 up to September 1 between 12.00-20.00 the whole discharge less than 15 m<sup>3</sup>/s should be channeled into river to feed the waterfall. The owners of Jägala Energy OÜ have decided to design and construct the plant in accordance with the capacity and conditions prescribed in the already issued special water use permit and not to continue applying the increased water use.

Estonia has appointed a national focal point to UNFCCC and has ratified the Kyoto Protocol. The project is preliminary approved by Estonian Ministry of Environment as the project is named in the JI reserve of Estonia's NAP2 and it proves that the project is endorsed by the Estonian focal point. Nevertheless Estonia's JI procedures are not finalized and at the current moment no Letter of Endorsement or Letter of Approval are being issued.

### **3.1.2 Issued CARs / CRs**

Regarding section A "*General description of the project*" 10 Corrective Action Requests are raised (see CAR#1 - CAR#10 in the Determination Protocol in Appendix A).

Regarding section C "*Duration of the project activity / crediting period*" 1 Corrective Action Request is raised (see CAR#16 in the Determination Protocol in Appendix A).

### **3.1.3 Conclusion**

The project itself fulfils the prescribed requirements completely. The planned turbines are modern state-of-the-art turbines and represent current good practice for generation of electricity using hydropower.

The technical data are consistent and plausible. It is not expected that planned turbines will be substituted by better technologies within the project period.

The project time schedule is clear now and based to the signed contracts with contractors and suppliers. There is sufficient time foreseen for the design, supply and construction of the turbines and auxiliary installations. The crediting period is clearly defined.

The PDD contains information how training, operating, controlling, maintenance will be organized and managed. The aspects regarding future responsibilities and quality assurance are fixed.

Nevertheless there is no comprehensive separate feasibility study, the calculated production estimates are realistic, as they are based also to the real production data gained from neighbouring Linnamäe HPP and long-term measuring data and projections of water flows in river.

The Letter of Endorsement is not issued as Estonia's JI procedures are not finalized yet. Due to the missing national guidelines, the respective requirements could not be checked yet. Before TÜV SÜD can submit the project for registration at JISC website, the publishing of National JI-Guidelines is a pre-requirement. Hence this issue will be considered as an outstanding issue requiring a final revision of this determination report.

The issues indicated in CARs are considered to be resolved.

## **3.2 Baseline**

### **3.2.1 Findings**

CDM methodology ACM0002/Version 6 (May 2006) has been applied. The Operating and Build Margins have been calculated on the basis of detailed electricity generation and fuel consumption data from years 2003-2005 of 19 Estonia's oil shale, natural gas and other fossil fuels consuming as well as renewable energy plants supplying power to the grid. Additionality of the project is proven using the ver. 2 of the CDM Tool for the Demonstration and Assessment of Additionality as approved by the CDM Executive Board.

The discussion and selection of the baseline methodology is transparent as all data used are specified and documented. Also the discussion and determination of the chosen baseline is transparent. Different approaches have been presented and plausible reasons for the approach chosen have been given.

Financial calculations are based to the amendments of the Estonian Electricity Market Act, entered into force on May 1 2007, which gives to operators of renewable electricity to sell its power at a fixed feed-in tariff of 1.15 EEK/kWh during the fixed period.

As financing from EU or other multilateral or bilateral sources for hydro power projects in Estonia is limited, the investor requirements and the risks associated with the renewable electricity support scheme, additional revenue is required in the situation of rapid increase of the construction costs, to make the project utilizing modern hydropower equipment financially viable.

### **3.2.2 Issued CARs / CRs**

Regarding section B "*Baseline*" 5 Corrective Action Requests and 1 Clarification Request are raised (see CAR#11-CAR#15 and CR#1, in the Determination Protocol in Appendix A).

### **3.2.3 Conclusion**

The additional explanations regarding baseline methodology are sufficient. The baseline does take into account the major national and/or sectoral policies, macro-economic trends and political developments. The determined baseline emission factor for the electricity grid is consistent with the NAP. Relevant key factors are described and their impact on the baseline and the project risk is evaluated. The baseline determination is compatible with available data and can be considered as conservative.

In Step 3 "Barrier analysis" it is shown that the investment barriers are the main issue of realising such projects. The prepayment from the sale of carbon credits can also be utilized as part of the equity capital, thus lowering the financial risk for the equity investors. This is confirmed by official letter of a bank institution (Nordea Bank).

Additionally to the demonstrated Step 3 "barrier analysis" it is outlined in step 2 "financial analysis" the financial modelling. The financial analysis shows also that the income from sale of Emis-

sion Reduction Units during 2008-12 improves the IRR of the project and enables to generate a positive NPV of the investment, thus making the project more attractive for the investors to undertake. An excel file was provided to the assessment team where financial analysis including sensitivity analysis is elaborated.

Taking to account the estimation of generation and the respective financial attractiveness the implementation of the hydropower project can be considered as additional.

The issues indicated in CARs and CRs are considered to be resolved. The project fulfils all prescribed requirements.

### **3.3 Monitoring Plan**

#### **3.3.1 Findings**

No separate monitoring plan exists but a detailed description of monitoring activities in section D of the PDD is presented. Also an Excel table for monthly and annual data handling are prepared. During the initial verification audit it should be checked whether the PDD-description has been used as basis for a separate, detailed monitoring plan.

In section D.2 of the PDD it is presented the data, which should to be monitored during the operational phase of the HPP, including ex ante calculated data.

The electricity transmission and measurement system will be able to measure the amount of electricity imported from the national grid (maybe from different voltage levels) for self-consumption (e.g. in case of stoppage of hydro-turbines).

The presented monitoring methodology does reflect current good practice and is supported by the monitored and recorded data. The monitoring methodology is in accordance with the chosen methodology. The monitoring provisions are in line with the project boundaries.

The project proponents decided to use the net energy production  $EG_y$  (energy which is fed into the grid minus energy which is taken from the grid in times where the hydro-turbines do not produce enough energy to cover the self-consumption of the plant). The area of the reservoir is not much bigger compared to the average watered area during seasonal flooding in spring and autumn and therefore the emissions from the reservoir can be estimated as marginal. Therefore no project emissions have to be taken into account for the externally provided auxiliary energy. No leakage exists. The baseline emission factor will not be changed during the crediting period. The remaining variable to be monitored is therefore  $EG_y$ . This parameter will be monitored and measured in a re-traceable and plausible way. The monitoring provisions are in line with the project boundaries. In case of meter malfunctions the internal metering system of the hydro turbines (SCADA-systems) can serve as back-up.

The existing water use permit is valid till 10.07.2010. As long as no prolonged water use permit exists, no further emission reductions can be generated after that date. It is assumed that for a renewed water use permit the EIA and its approval are the pre-requirements and the status of EIA and prolongation of water use permit should be monitored, too.

#### **3.3.2 Issued CARs / CRs**

Regarding section D "*Monitoring Plan*" 3 Corrective Action Requests and 3 Clarification Requests are raised (see CAR#17 - CAR#19 and CR#2 - CR#4 in the Determination Protocol in Appendix A).

### **3.3.3 Conclusion**

It is foreseen to monitor all measurable parameters (annual power production and power import for self-consumption), prolongation of water use permit and also ex ante calculated data. This approach is sufficiently.

It is clearly mentioned that annual power production means the net energy production (delivered electricity to the grid minus the demanded electricity from the grid). It means, that every internal demand of hydro-power plant from which voltage level it ever come (also demand from low voltage grid) has to be deducted.

The description of management structure is sufficiently described. All aspects regarding future responsibilities for registration, monitoring, measurement are already fixed in advance.

An excel-spread-sheet for recording and reporting of electricity production and self-consumption and calculation of emission reductions is pre-prepared. This could be accepted as only very few figures have to be recorded and multiplied for calculation of emission reductions and because no further requirements exist. Nevertheless it remains a minor risk that the monitoring is not traceable. Before the first verification the owner of HPP should prepare the monitoring plan as a separate document to clarify all monitoring actions and procedures for every participating person in more detail. Also a respectively prepared logbook to write down the read values can be very helpful for the monitoring staff.

The issues indicated in CARs and CRs are considered to be resolved. The project fulfils all the prescribed requirements.

## **3.4 Estimation of GHG Emission Reductions**

### **3.4.1 Findings**

The calculation is according to the approved CDM-methodology. Uncertainties in the GHG emissions estimates are addressed.

The project's spatial boundaries are clearly described. Regarding emission sources all aspects are covered. Only CO<sub>2</sub> emissions have correctly been identified as relevant for the project. No aspects of leakage have been identified; hence a leakage calculation is not requested.

Hydropower does not create any anthropogenic greenhouse gas emissions in operation and project emissions from the reservoir with a size of 10 ha and average height of 2 m in the old riverbed can be considered negligible.

The project will definitely result in fewer GHG emissions than the baseline scenario. The used forecast of electricity generation is based on the calculations which considering the efficiency of the selected turbines and available water flow. The calculation of emission reductions itself is correctly computed.

### **3.4.2 Issued CARs / CRs**

Regarding section E " *Estimation of greenhouse gas emission reductions*" 2 Corrective Action Requests and 1 Clarification Request are raised (see CAR#20 - CAR#21 and CR#5 in the Determination Protocol in Appendix A).

### **3.4.3 Conclusion**

The issues indicated in CARs and CRs are considered to be resolved. The project fulfils all the prescribed requirements.

## **3.5 Environmental Impacts**

### **3.5.1 Findings**

The most relevant environmental impacts are sufficiently described in the PDD.

The environmental impact assessment (EIA) has been carried out by local consultancy company Ecoman OÜ. The draft EIA report concluded that the restoration of the hydropower plant does not have a significant impact on the attractiveness of the Jägala waterfall and on the regime of the Natura 2000 special conservation area. Special water use permit issued by Harju County Environmental Service allows implementing the project according to the conditions, which requires to keep sanitary minimum water flow 1,5 m<sup>3</sup>/s in river and during the summer season from May 1 up to September 1 between 12.00-20.00 the whole discharge less than 15 m<sup>3</sup>/s should be channeled into river (waterfall).

The owners of Jägala Energy OÜ have decided to design and construct the plant in accordance with the capacity and conditions prescribed in the already issued special water use permit.

The draft EIA report also concluded that the planned Jägala-Joa HPP plant does not have an impact on the fish under protection as the fish cannot access the impacted area due to the dam of Linnamäe HPP downstream.

Analyzed social and economic effects and impacts of Jägala-Joa HPP are expected to be mainly positive.

EIA report foresees the need for future day-to-day surveillance and measurement of sanitary minimum water flows and the water level of the reservoir

There are no transboundary environmental impacts.

The EIA should be finalised to have a precondition for the prolongation of the special water permit of Jägala Energy OÜ, which is valid up to 10.07.2010.

### **3.5.2 Issued CARs / CRs**

Regarding section F "*Environmental impacts*" 5 Corrective Action Requests are raised (see CAR#22 - CAR#26 in the Determination Protocol in Appendix A).

### **3.5.3 Conclusion**

The existing water use permit is valid till 10.07.2010. It is assumed that for a renewed water use permit the EIA and its approval are the pre-requirements. As long as no prolonged water use permit is issued no further emission reductions after 10.07.2010 can be generated. This issue is included as "data to be monitored" in the monitoring plan.

The issues indicated in CARs and CRs are considered to be resolved. The project fulfils all prescribed requirements.

## 3.6 Local stakeholder process

### 3.6.1 Findings

Public meetings and consultations have been held according to the requirements set for the public consultations in EIA process.

The first public meeting to discuss the programme for the EIA was held on February 21 2006 and attended by 35 people representing local people, municipal government, project developer, environmental organisations and the Environmental Service of Harju County Government.

The purpose of the meeting was to present and to discuss the programme for the EIA. On the basis of the questions raised at the meeting the Environmental Service of Harju County Government formulated proposals to amend the EIA programme which were taken into account by the developer.

The second meeting to discuss the EIA of the project was held on June 21 and attended by 27 people representing local people, municipal government, project developer, environmental organisations and the Environmental Service of Harju County Government. On the basis of the questions raised at the meeting the Environmental Service of Harju County Government formulated further proposals to take into account in the EIA.

The announcement about public display of the EIA draft report and on stakeholder meeting to be held on June 21 2006 has been published in local newspaper “Harjumaa” on June 2 2006 no 40 (1433)

As of today all proposals have been addressed and respective documents enclosed to the EIA report.

Written agreements have been concluded with the following stakeholders:

- notarial agreements with all landowners affected by the planned reservoir
- entrepreneurs organizing rafting events downstream of the Jägala waterfall
- co-operative representing 27 real estates regarding preservation of the beach at the reservoir

Comments and proposals to the EIA Program and EIA Report are available.

### 3.6.2 Issued CARs/CRs

Regarding section E “Stakeholders’ comments” 3 Corrective Action Requests are raised (see CAR#27 - CAR#29 in the Determination Protocol in Appendix A).

### 3.6.3 Conclusion

Provided information deems that the consultation process was carried out according the national regulations. The conducted stakeholder process is sufficiently described.

Comments and proposals to the draft EIA report should be taken into the consideration in compiling the final EIA report.

The issues indicated in CARs and CRs are considered to be resolved. The project fulfils all the prescribed requirements.

## 4 COMMENTS BY PARTIES, STAKEHOLDERS AND NGOS

TÜV SÜD started to publish the PDD and the baseline study on its homepage and on the UNFCCC JI project site on June 05 and was open for comments until July 04, 2007.

Within this period no comments have been received.

## 5 DETERMINATION OPINION

TÜV SÜD has performed a determination of the “Jägala-Joa Hydropower Joint Implementation Project, Estonia”.

The determination was performed on the basis of UNFCCC criteria as well as criteria given to provide for consistent project operations, monitoring and reporting.

The review of the project design documentation and the subsequent follow-up interviews have provided TÜV SÜD with sufficient evidence to determine the fulfilment of stated criteria. In our opinion, the project itself meets all relevant UNFCCC requirements for JI.

By building a hydro power plant with state of the art turbines the project results in reductions of CO<sub>2</sub> emissions that are real, measurable and give long-term benefits to the mitigation of climate change.

Despite of the fact that the project is already mentioned in the JI-reserve in the 2. National Allocation Plan the Letter of Endorsement is not issued yet. Furthermore the Estonian national JI procedures are not finalized yet. Hence we can not state hitherto, that the project complies with the National JI Guidelines. Complying with that eligibility criterion is pre-required to submit the project for registration at the JISC. In order to register the project at the JISC the AIE has to be provided at least with the Letter of Approval of the host country.

The determination is based on the experience of our own onsite visit and on the information made available to us and the engagement conditions detailed in this report. TÜV SÜD can not guarantee the accuracy or correctness of this information. Hence, TÜV SÜD can not be held liable by any party for decisions made or not made based on the determination opinion.”

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
<b>A. General description of the project</b>				
<b>A.1. Title of the small-scale project:</b>				
A.1.1. Does the used project title clearly enable to identify the unique JI activity?	27	Because of several hydro power plants along the Jägala River the project title is not unique enough.  <b>Corrective Action Request:</b> The title should be more specified, e.g. capacity of the HPP or <i>Jägala-Joa</i> or <i>Jõujaama</i> ?	CAR #1	<input checked="" type="checkbox"/>
A.1.2. Are there any indication concerning the revision number and the date of the revision?		Version number and date is clearly indicated.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.1.3. Is this consistent with the time line of the project's history?		Partly. Before the 2 <sup>nd</sup> World War it was named Jägala Pulp Factory ( <i>Puumassivabrik</i> ), during the Soviet period Jägala-Joa HPS	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>A.2. Description of the small-scale project:</b>				
A.2.1. Is the description delivering a transparent overview of the project activities?		Yes	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.2.2. What proofs are available demonstrating that the project description is in compliance with the actual situation or planning? e.g. contracts with suppliers, applications for permissions, EIA, LoE, permissions, visit	1, 5, 6, 12, 13, 15, 16, 18, 19, 20,	Adequate proofs are missing – not signed contract with the supplier (only offer available without clear validity period), EIA not approved yet, no Grid Connection nor Power Purchase Agreement signed (available only offer for the expansion of the existing 110/20 kV substation sent by e-mail, which does not cover the construction of the power line between HPP and sub-station)  <b>Corrective Action Request:</b> Adequate proofs should be presented demonstrating that the implementation of the project according to the planned time-schedule is possible	CAR #2	<input checked="" type="checkbox"/>
A.2.3. Is the information provided by these proofs	6, 17	To keep the presented time-schedule is doubtful	CAR	<input checked="" type="checkbox"/>

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
consistent with the information provided by the PDD?		<b>Corrective Action Request:</b> Conditions for grid connection, information regarding construction of power lines, transformers, metering unit etc should be presented more clearly and these should be based to the actual offers from suppliers and contractors	#3	
A.2.4. Is all information provided consistent with details provided by further chapters of the PDD?	30	No <b>Corrective Action Request:</b> Status of EIA should be presented consistently Project implementation time schedule should be revised	CAR #4	<input checked="" type="checkbox"/>
<b>A.3. Project participants:</b>				
A.3.1. Is the form required for the indication of project participants correctly applied?		Yes	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.3.2. Is the participation of all listed entities or Parties confirmed by each one of them?	14	Term Sheet between Jägala Energy OÜ and the Austrian JI/CDM Programme signed on 14 <sup>th</sup> of November 2006	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.3.3. Is all information provided in consistency with details provided by further chapters of the PDD (in particular annex 1)?		Yes	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>A.4. Technical description of the small-scale project:</b>				
<i>A.4.1. Location of the small-scale project:</i>				
A.4.1.1. Does the information provided on the location of the project activity allow for a clear identification of the site(s)?	12, 13, 30	From the view of the desk, yes! The location can be clearly identified <b>Corrective Action Request:</b> The derivation channel and upstream dam in Figure 2 in PDD should be indicated more clearly. And boundary characteristic presented in green colour in Figure 2, which is not relevant,	CAR #5	<input checked="" type="checkbox"/>

# JI-SSC-Determination Protocol

 Date of Completion: 14. January 2008  
 Number of Pages: 41

Industrie Service

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
		should be removed		
A.4.1.2. How is it ensured and/or demonstrated, that the project proponents can implement the project at this site (ownership, licenses, contracts etc.)?		Land property "Jõujaama" (Powerplant) is owned by Jägala Energy OÜ according to the land register. Derivation channel and upstream dam is owned by the Jägala Energy OÜ according to the sales contract signed by Jõelähtme Municipality and Jägala Energy OÜ.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>A.4.2. Small-scale project type(s) and category(ies):</b>				
A.4.2.1. To which category(ies) is the project activity belonging to? Is the category correctly identified and indicated?	30	The project belongs to the scope 1 (energy industries) and category AMS I.D. (SSC, renewable electricity to the grid)  <b><u>Corrective Action Request:</u></b> The category should be mentioned in the PDD.	<b>CAR #6</b>	<input checked="" type="checkbox"/>
<b>A.4.3. Technology(ies) to be employed, or measures, operations or actions to be implemented by the small-scale project:</b>				
A.4.3.1. Does the project design engineering reflect current good practices?	4, 5, 6, 7, 30	Cannot be evaluated yet, because the project design is described very general.  <b><u>Corrective Action Request:</u></b> A more detailed description regarding technology in the PDD is needed. The validation team should be provided with feasibility study or other technical descriptions. On which description were the tenders based?	<b>CAR #7</b>	<input checked="" type="checkbox"/>
A.4.3.2. Does the description of the technology to be applied provide sufficient and transparent input to evaluate its impact on the greenhouse gas balance?  - flow (min/max/average), flow curves - feasibility study	4, 5, 6, 7, 30	No. There is not any information, about flows, heads, number of turbines and generators, turbine types, generator type, kind of operation (e.g. water flow regulation) ...  See comment above  Required biological minimum in river 1,5 m3/s according to the water permit. During the period from 1 <sup>st</sup> of May to 1 <sup>st</sup> of September between 12-00 and 20-00 in case of flow below 15 m3/s the whole	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Project Title: Jägala Hydropower Joint Implementation Project in Estonia  
 Date of Completion: 14. January 2008  
 Number of Pages: 41

Industrie Service

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
<ul style="list-style-type: none"> <li>- required biological minimum, required level up- and downstream</li> <li>- number of turbines and generators, turbine types, generator type</li> <li>- technology transfer / assembling</li> <li>- kind of operation</li> <li>- reservoir, volume of reservoir</li> <li>- Equipment Procurement</li> <li>- Land ownership, Land lease agreements</li> <li>- Long term service agreement</li> </ul>		flow should be canalized into river. Allowed upstream maximum level in reservoir 28,85 m. Planned level in channel before the HPP 28,75 m. Area of the reservoir ca 10 ha, no remarkable volume for regulation purposes exists.		
A.4.3.3. Is the technology implemented by the project activity environmentally safe?		See comments above	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.4.3.4. Is the information provided in compliance with actual situation or planning?		See comments above	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.4.3.5. Does the project use state of the art technology and / or does the technology result in a significantly better performance than any commonly used technologies in the host country?		See comments above	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.4.3.6. Is the project technology likely to be substituted by other or more efficient technologies within the project period?		See comments above	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.4.3.7. Does the project require extensive initial training and maintenance efforts in order to work as presumed during the project period?		Yes, because Jägala Energy OÜ is the operator of the HPP and has limited expertise in operating HPPs. Despite of the fact that the power plant is fully automatic managed, remote monitored and operated by Internet and GSM at least initial staff training is necessary.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Industrie Service

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
A.4.3.8. Is information available on the demand and requirements for training and maintenance?	30	To conduct initial staff training and maintenance is mentioned in the PDD. Regularly the project owner will operate and maintain the power plant. Technologically more complex matters of maintenance should be conducted by the technology supplier.  <b><u>Corrective Action Request:</u></b> The requirements for training and maintenance should be explained in more detail	CAR #8	<input checked="" type="checkbox"/>
A.4.3.9. Is a schedule available for the implementation of the project and are there any risks for delays?	6, 30	The schedule for the implementation of the power plant described in PDD is not clearly achievable, as no agreements signed yet with the supplier and different contractors (e.g. grid connection, power lines etc)  <b><u>Corrective Action Request:</u></b> The time schedule should be revised	CAR #9	<input checked="" type="checkbox"/>
<b>A.4.4. Brief explanation of how the anthropogenic emissions of greenhouse gases by sources are to be reduced by the proposed small-scale project, including why the emission reductions would not occur in the absence of the proposed small-scale project, taking into account national and/or sectoral policies and circumstances:</b>				
A.4.4.1. Is the form required for the indication of projected emission reductions correctly applied?		Yes.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
A.4.4.2. Are the figures provided consistent with other data presented in the PDD?	30	No, It should be clearly indicated that the crediting period starts with 1.1.2008 and not earlier.  <b><u>Corrective Action Request:</u></b> The indicated amounts of ERUs 2008-2012 are too high and should be adjusted. See A.4.4.1, E.4., E.5. and E.6.	CAR #10	<input checked="" type="checkbox"/>
<b>A.4.5. Confirmation that the proposed small-scale project is not a debundled component of a larger project:</b>

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
B.2.2. In case of any modification or retrofit of existing facilities: Is data available to determine the historic production level?		The historic production data might be available in Eesti Energia, but not checked.  Old Jägala-Joa HPP has been closed in 1970 due to the fact, that two big power plants (Balti and Eesti) using oil-shale started operation in the end of 1960-ies and in the beginning of 1970-ies.  According to the oral information the installed capacity of the old Jägala-Joa HPP was 1400 kW.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
B.2.3. In case of any modification or retrofit of existing facilities: Have conservative assumptions been applied in order to estimate the point in time when the existing equipment needs to be replaced?		There is no equipment exist at the moment - old equipment has been removed several years ago already.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
B.2.4. Have all technically feasible baseline scenario alternatives to the project activity been identified and discussed by the PDD? Why can this list be considered as being complete?		See comment below		<input checked="" type="checkbox"/>
B.2.5. Have realistic and credible alternatives been identified providing comparable outputs or services? (step 1a)	30	Alternatives are explicitly not discussed. The used additionality tool in the Baseline study is only done for wind parks.  <b><u>Corrective Action Request:</u></b>  The JI-Guidance for baseline setting and monitoring plan should be applied. The additionality test has to be applied and specified for restoration of hydro power plants.	<b>CAR #11a</b>	<input checked="" type="checkbox"/>
B.2.6. Is the project activity without JI included in these alternatives? (step 1a)	30	No! see comment above  <b><u>Corrective Action Request:</u></b>  The project activity without JI should be discussed. The additionality of the proposed project is not yet proven. Table 1	<b>CAR #11b</b>	<input checked="" type="checkbox"/>

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
<b>B.4. Further baseline information, including the date of baseline setting and the name(s) of the person(s)/entity(ies) setting the baseline Emissions reductions</b>				
B.4.1. Is there any indication of a date when determining the baseline?		Yes, the Baseline Study is dated November 6, 2006 and conducted by Stockholm Environment Institute Tallinn Centre.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
B.4.2. Is this in consistency with the time line of the PDD history?		Yes	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
B.4.3. Is information of the person(s) / entity(ies) responsible for the application of the baseline methodology provided in consistency with the actual situation?	30	No, <b><u>Corrective Action Request:</u></b> The person who is responsible for the application should be mentioned in the PDD.	<b>CAR #15</b>	<input checked="" type="checkbox"/>
B.4.4. Is information provided whether this person / entity is also a project participant?		See comment above		<input checked="" type="checkbox"/>
<b>C. Duration of the project activity / crediting period</b>				
C.1. Are the project's starting date and operational lifetime clearly defined and reasonable?		The project starting date is defined with the beginning of construction works of the hydro power station on May 1, 2007.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
C.2. Is the assumed crediting time clearly defined and reasonable (crediting period between 2008 and 2012)?	30	The assumed crediting time is reasonable, however it is not clearly distinguished between the Kyoto-Period (2008-2012) and the time before. <b><u>Corrective Action Request:</u></b> It should be clearly distinguished between the Kyoto-Period (2008-2012) and the crediting time before.	<b>CAR #16</b>	<input checked="" type="checkbox"/>

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD												
<b>D. Monitoring plan</b>																
<b>D.1. Description of monitoring plan chosen:</b>																
D.1.1. Is the applied methodology considered being the most appropriate one?		Yes.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>												
<b>D.2. Data to be monitored:</b>																
In the following “data checklists” are shown for all data which are fixed at determination time, and “monitoring checklists” for all data which have to be monitored during the life-time of the project.																
D.2.1. Is the list of parameters presented by chapter D.2. considered to be complete with regard to the requirements of the applied methodology?	30	PDD chapter D.2 covers only the data which are to be monitored during project operation (net electricity supplied to the grid). It is required that also other data which are determined just once ex ante, are covered.  <b><u>Corrective Action Request:</u></b> Add ex ante required data to PDD chapter D.2 (see following sections D.2.2. to D.2.13.).	<b>CAR #17</b>	<input checked="" type="checkbox"/>												
D.2.2. Is the choice of ex-ante or ex-post vintage of OM and BM factors clearly specified in the PDD?		It is clearly stated that the ex-ante approach is used.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>												
Fill in the required amount of sub checklists for fixed data parameter and comment any line answered with “No”																
D.2.3. Parameter Title: Annual electricity supplied to the grid prior to retrofit (applicable only for retrofit and modification activities)		<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 70%;">Data Checklist</th> <th style="width: 30%;">Yes / No</th> </tr> </thead> <tbody> <tr> <td>Title in line with methodology?</td> <td style="text-align: center;">Yes</td> </tr> <tr> <td>Data unit correctly expressed?</td> <td style="text-align: center;">Yes</td> </tr> <tr> <td>Appropriate description of parameter?</td> <td style="text-align: center;">Yes</td> </tr> <tr> <td>Source clearly referenced?</td> <td style="text-align: center;">Yes</td> </tr> <tr> <td>Correct value provided?</td> <td style="text-align: center;">Yes</td> </tr> </tbody> </table>	Data Checklist	Yes / No	Title in line with methodology? CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
<b>E.2. Estimated leakage and formulae used in the estimation, if applicable:</b>				
E.2.1. Are formulae required for the estimation of leakage emissions correctly presented, enabling a complete identification of parameter to be used and / or monitored?		No leakage effect was detected.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>E.3. The sum of E.1. and E.2.:</b>				
E.3.1. Is the data provided under this section in consistency with data as presented by other chapters of the PDD?		The section is correctly filled out; the data are consistent with other data in the PDD and associated documents.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>E.4. Estimated baseline emissions and formulae used in the estimation:</b>				
E.4.1. Are formulae required for the estimation of baseline emissions correctly presented, enabling a complete identification of parameter to be used and / or monitored?		The calculation of the emission factor of the Estonian grid is not explained. See comment above in section E.1.1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>E.5. Difference between E.4. and E.3 representing the emission reductions of the project:</b>				
E.5.1. Are formulae required for the determination of emission reductions correctly presented?		Yes.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>E.6. Table providing values obtained when applying formulae above:</b>				
E.6.1. Will the project result in fewer GHG emissions than the baseline scenario?		The project will result in fewer GHG emissions than the baseline scenario!	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
E.6.2. Is the form/table required for the indication of projected emission reductions cor-	30	Yes, in principle. <b><u>Corrective Action Request:</u></b>	<b>CAR #21</b>	<input checked="" type="checkbox"/>

rectly applied?		The AAUs should not be included in this table.		
E.6.3. Is the projection in line with the envisioned time schedule for the project's implementation and the indicated crediting period?		Yes.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
E.6.4. Is the data provided under this section in consistency with data as presented by other chapters of the PDD?		Yes.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>F. Environmental impacts</b>				
<b>F.1. Documentation on the analysis of the environmental impacts of the project, including transboundary impacts, in accordance with procedures as determined by the host Party:</b>				
F.1.1. Has an analysis of the environmental impacts of the project activity been sufficiently described?	30	No! The description is very general and not project specific. Although the HPP is a restored one, it should be nevertheless roughly described which impacts the restoration will really have.  <b><u>Corrective Action Request:</u></b> The analysis of the environmental impacts of the project activity should be described briefly.	CAR #22	<input checked="" type="checkbox"/>
F.1.2. Are there any Host Party requirements for an Environmental Impact Assessment (EIA), and if yes, is an EIA approved?	30	According to the General Plan of the Municipality it is planned to restore the Jägala-Joa HPP. EIA is not approved yet.  <b><u>Corrective Action Request:</u></b> Information regarding the approval conditions should be described.	CAR #23	<input checked="" type="checkbox"/>
F.1.3. Will the project create any adverse environmental effects?	30	See comment above  <b><u>Corrective Action Request:</u></b> Mitigation measures of the negative environmental impacts should	CAR #24	<input checked="" type="checkbox"/>

Project Title: Jägala Hydropower Joint Implementation Project in Estonia  
 Date of Completion: 14. January 2008  
 Number of Pages: 41

Industrie Service

<p>CAR #4</p> <p>Status of EIA should be presented consistently</p> <p>Project implementation time schedule should be revised</p>	<p>A 2.4</p>	<p>The EIA has been currently put to hold in order to wait for the conditions of the Environmental Service of Harju County for prolongation of the special water permit of the near-by Linnamäe hydropower plant. The main discussion item is possible establishment of a fish ladder.</p> <p>The EIA for Jägala-Joa HPP was voluntarily undertaken with the sole aim to increase the allowed capacity of the HPP. As of today the owners of Jägala Energy OÜ have decided to construct the plant in accordance with the capacity and conditions prescribed in the already issued special water use permit.</p> <p>Estonian Maritime Biology Institute has in August 2007 carried out control fish catching related to both Jägala-Joa and Linnamäe HPP with a positive outcome for the continued operation of Linnamäe HPP and implementation of Jägala-Joa HPP project.</p> <p>Independent of the decision related to Linnamäe HPP, the design incl. maximum flow of turbines of 14 m/s of Jägala-Joa HPP will not be affected as the plant is located upstream of Linnamäe HPP and it does not make sense to establish a fish ladder (theoretical worst case for Linnamäe) at Jägala-Joa as the waterfall itself serves as a natural obstacle for fish migration.</p> <p>In accordance with the signed contract, the detailed design drawings of the plant will be prepared within 4 weeks i.e. by early October and the drawings will be available for review by validator if necessary. The design will follow standard design of GHE that can be seen in document "GHE presentation.ppt" (p. 23).</p>	<p>The existing water use permit is valid till 10.07.2010. The project is designed according to existing permit. It is assumed that for a renewed water use permit the EIA and its approval are the pre-requirements. Hence there is a remarkable risk that the prolongation of the water permit for Jägala may have relevant impacts at least on the operation conditions of Jägala power plant.</p> <p>As long as no further water use permit is in sight a new monitoring parameter "Approval of EIA and prolonged water use permit beyond 2010 available" should be amended. If this parameter is not fulfilled for the verification of the year 2010 no further emission reductions after 10.07.2010 can be generated.</p> <p>The revised project time schedule is reasonable and consistent with confirmation of order and signed contract.</p>

 Date of Completion: 14. January 2008  
 Number of Pages: 41

Industrie Service

<p>CR #1</p> <p>Why does the Jägala HPP need JI-support in comparison to the other restored HPPs?                  Is there a list of all the other projects (location, capacities, operator)?                  Which differences to all the other projects do the Jägala HPP have?                  Which decisive proofs for the differences can be provided?</p>	<p>B 2.8</p>	<p>Jägala HPP needs JI-support as otherwise the financial return on the investment is not sufficient and the project is not able to attract equity and debt financing.</p> <p>Other HPP projects in Estonia have been constructed without carbon financing for the following reasons:</p> <ul style="list-style-type: none"> <li>- the costs were lower as the projects mainly concern restoration of former HPP plants</li> <li>- the projects utilized old turbines (renovated) or less advanced turbine technology</li> <li>- construction and operation costs have significantly increased in Estonia over last years due to rapid economic growth</li> <li>- owners of the plants have implemented the projects for other reasons – 1) image (Linnamäe, Keila-Joa 2) to establish a reservoir for swimming (Kamari)</li> <li>- expectations for feed-in tariff development were more optimistic as under former legislation the tariff was linked to consumer tariff</li> <li>- cost of capital has been lower for other projects (e.g in case of Eesti Energia and Linnamäe &amp; Keila-Joa HPP)</li> </ul> <p>This was also explained during the determination visit to Mr. Mellis.</p> <p>During preparation of the JI documentation for the JI project in question, no other hydropower plants have been commissioned in Estonia. The banks have refused to finance the projects (e.g. Sangaste, Purtse 2) due to low feasibility. For proof of financial additionality please also see enclosed statement from Nordea Bank of October 26 2007.</p>	<p>The common practice analysis is relative extensive now. Decisive reasons for the mentioned differences were given.</p>
