VERIFICATION OF THE
«WASTE HEAP DISMANTLING IN SVERDLOVSK
DISTRICT OF LUHANSK REGION OF UKRAINE WITH
THE AIM OF REDUCING GREENHOUSE GASES
EMISSIONS INTO THE ATMOSPHERE»

REPORT No. UKRAINE-VER/0841/2012

REVISION No. 02

BUREAU VERITAS CERTIFICATION

VERIFICATION REPORT

| | |
|--|---|
| Date of first issue: 03/12/2012 | Organizational unit: Bureau Veritas Certification Holding SAS |
| Client: Carbon Marketing and Trading Ltd. | Client ref.: Mr. Tahir Musavev |

Summary:

Bureau Veritas Certification has made the second periodic verification of the «Waste Heap Dismantling in Sverdlovsk district of Luhansk Region of Ukraine with the Aim of Reducing Greenhouse Gases Emissions into the Atmosphere», project of Small Private Commercial Production Company "SLAVUTICH" located near village Fedorivka Sverdlovsk district, Luhansk Region, Ukraine, and applying JI specific approach, on the basis of UNFCCC criteria for the JI, as well as criteria given to provide for consistent project operations, monitoring and reporting. UNFCCC criteria refer to Article 6 of the Kyoto Protocol, the JI rules and modalities and the subsequent decisions by the JI Supervisory Committee, as well as the host country criteria.

The verification scope is defined as a periodic independent review and ex post determination by the Accredited Entity of the monitored reductions in GHG emissions during defined verification period, and consisted of the following three phases: i) desk review of the monitoring report against project design and the baseline and monitoring plan; ii) follow-up interviews with project stakeholders; iii) resolution of outstanding issues and the issuance of the final verification report and opinion. The overall verification, from Contract Review to Verification Report & Opinion, was conducted using Bureau Veritas Certification internal procedures.

The first output of the verification process is a list of Clarification, Corrective Actions Requests, Forward Actions Requests (CR, CAR and FAR), presented in Appendix A.

In summary, Bureau Veritas Certification confirms that the project is implemented as planned and described in approved project design documents. Installed equipment being essential for generating emission reduction runs reliably and is calibrated appropriately. The monitoring system is in place and the project is generating GHG emission reductions. The GHG emission reduction is calculated accurately and without material errors, omissions, or misstatements, and the ERUs issued totalize 1008644 tonnes of CO₂ equivalent for the monitoring period from 01/07/2012 to 30/11/2012.

Our opinion relates to the project's GHG emissions and resulting GHG emission reductions reported and related to the approved project baseline and monitoring, and its associated documents.

1 INTRODUCTION

Carbon Marketing and Trading Ltd. has commissioned Bureau Veritas Certification to verify the emissions reductions of its JI project «Waste Heap Dismantling in Sverdlovsk district of Luhansk Region of Ukraine with the Aim of Reducing Greenhouse Gases Emissions into the Atmosphere» (hereafter called “the project”) located near village Fedorivka Sverdlovsk district, Luhansk Region, Ukraine.

This report summarizes the findings of the verification of the project, performed on the basis of UNFCCC criteria, as well as criteria given to provide for consistent project operations, monitoring and reporting.

1.1 Objective

Verification is the periodic independent review and ex post determination by the Accredited Independent Entity of the monitored reductions in GHG emissions during defined verification period.

The objective of verification can be divided in Initial Verification and Periodic Verification.

UNFCCC criteria refer to Article 6 of the Kyoto Protocol, the JI rules and modalities and the subsequent decisions by the JI Supervisory Committee, as well as the host country criteria.

1.2 Scope

The verification scope is defined as an independent and objective review of the project design document, the project’s baseline study, monitoring plan and monitoring report, and other relevant documents. The information in these documents is reviewed against Kyoto Protocol requirements, UNFCCC rules and associated interpretations.

The verification is not meant to provide any consulting towards the Client. However, stated requests for clarifications, corrective and/or forward actions may provide input for improvement of the project monitoring towards reductions in the GHG emissions.

1.3 Verification Team

The verification team consists of the following personnel:

Svitlana Gariyenchyk
Bureau Veritas Certification Team Leader, Climate Change Verifier

Sergii Verteletskyi
Bureau Veritas Certification Climate Change Verifier

Dmytro Balyn
Bureau Veritas Certification Climate Change Verifier, Technical Specialist

This verification report was reviewed by:

Ivan Sokolov
Bureau Veritas Certification, Internal Technical Reviewer

Vladimir Lukin
Technical Specialist

2 METHODOLOGY

The overall verification, from Contract Review to Verification Report & Opinion, was conducted using Bureau Veritas Certification internal procedures.

In order to ensure transparency, a verification protocol was customized for the project, according to the version 01 of the Joint Implementation Determination and Verification Manual, issued by the Joint Implementation Supervisory Committee at its 19 meeting on 04/12/2009. The protocol shows, in a transparent manner, criteria (requirements), means of verification and the results from verifying the identified criteria. The verification protocol serves the following purposes:

- It organizes, details and clarifies the requirements a JI project is expected to meet;
- It ensures a transparent verification process where the verifier will document how a particular requirement has been verified and the result of the verification.

The completed verification protocol is enclosed in Appendix A to this report.

2.1 Review of Documents

The Monitoring Report (MR) submitted by Carbon Marketing and Trading Ltd. and additional background documents related to the project design and baseline, i.e. country Law, Project Design Document (PDD), and/or Guidance on criteria for baseline setting and monitoring, Host party criteria, Kyoto Protocol, Clarifications on Verification Requirements to be Checked by an Accredited Independent Entity were reviewed.

The verification findings presented in this report relate to the Monitoring Report version 01 dated 20/11/2012, version 02 dated 04/12/2012 and project as described in the determined PDD.

2.2 Follow-up Interviews

On 03/12/2012 Bureau Veritas Certification performed on-site interviews with project stakeholders to confirm selected information and to resolve issues identified in the document review. Representatives of Carbon Marketing and Trading Ltd. and Small Private Commercial Production Company "SLAVUTICH" were interviewed (see References). The main topics of the interviews are summarized in Table 1.

**Table 1 Interview topics**

| Interviewed organization | Interview topics |
|---|---|
| Small Private Commercial Production Company "SLAVUTICH" | Project implementation status Organizational structure Responsibilities and authorities Personnel training Quality management procedures and technology Records of equipment installation Control of metering equipment Metering record keeping system, database Cross-check of the information provided in the MR with other sources |
| Carbon Marketing and Trading Ltd. | Baseline methodology Monitoring plan Monitoring report Deviations from PDD |

2.3 Resolution of Clarification, Corrective and Forward Action Requests

The objective of this phase of the verification is to raise the requests for corrective actions and clarification and any other outstanding issues that needed to be clarified for Bureau Veritas Certification positive conclusion on the GHG emission reduction calculation.

If the Verification Team, in assessing the monitoring report and supporting documents, identifies issues that need to be corrected, clarified or improved with regard to the monitoring requirements, it should raise these issues and inform the project participants of these issues in the form of:

- (a) Corrective action request (CAR), requesting the project participants to correct a mistake that is not in accordance with the monitoring plan;
- (b) Clarification request (CL), requesting the project participants to provide additional information for the Verification Team to assess compliance with the monitoring plan;
- (c) Forward action request (FAR), informing the project participants of an issue, relating to the monitoring that needs to be reviewed during the next verification period.

The Verification Team will make an objective assessment as to whether the actions taken by the project participants, if any, satisfactorily resolve the issues raised, if any, and should conclude its findings of the verification.

To guarantee the transparency of the verification process, the concerns raised are documented in more detail in the verification protocol in Appendix A.

3 VERIFICATION CONCLUSIONS

In the following sections, the conclusions of the verification are stated.

The findings from the desk review of the original monitoring documents and the findings from interviews during the follow up visit are described in the Verification Protocol in Appendix A.

The Clarification, Corrective and Forward Action Requests are stated, where applicable, in the following sections and are further documented in the Verification Protocol in Appendix A. The verification of the Project resulted in 03 Corrective Action Requests, 03 Clarification Requests, and 0 Forward Action Requests.

The number between brackets at the end of each section corresponds to the DVM paragraph.

3.1 Remaining issues and FARs from previous verifications

There are no FARs from previous verification

3.2 Project approval by Parties involved (90-91)

Written project approvals by Ukraine and The Netherlands involved in the JI project have been issued by the DFP of that Party when submitting the first verification report to the secretariat for publication in accordance with paragraph 38 of the JI guidelines, at the latest.

A letter of approval from the Ukrainian Designated Focal Point was received for the proposed project, reference No. 2022/23/7, dated 27/07/2012.

A letter of approval from the Netherlands Designated Focal Point was received for the proposed project, reference 2012JI37, dated 31/07/2012.

The abovementioned written approval is unconditional.

3.3 Project implementation (92-93)

The technology applied in this project is the dense medium coal washing plant. The technological process and equipment used in the project reflect current good engineering practices. The basic technology of coal washing plant has gained wide popularity in the 1990s as the most efficient process for coal washing. Technological process is advanced, does not require vast amounts of materials and workforce, is reliable and productive. The technology used in this project is state-of-the-art technology and is unlikely to be replaced by any other technology during the lifetime of the project as it offer the best quality and

efficiency of the coal washing process among other technologies commonly used in Ukraine such as simple vibration screens and spiral separators.

The project has been initiated in the start of 2006. Installation and construction works were initiated by the end of 2007. 15th of November 2007 is the date of commissioning of the beneficiation plant equipment. The operations at the facility have started on the 15th of November 2007. The JI was one of the drivers for the project from the start and financial benefits provided by the JI mechanism were considered as one of the reasons to start the project and are crucial in the decision to start the operations.

All necessary equipment for the project is already implemented, and the starting date of emission reductions is 01/01/2008.

3.4 Compliance of the monitoring plan with the monitoring methodology (94-98)

The monitoring occurred in accordance with the monitoring plan included in the PDD regarding which the determination has been deemed final and is so listed on the UNFCCC JI website.

For calculating the emission reductions, key factors, such as additional electricity consumption, amount of used diesel fuel, amount of coal extracted from waste heaps, ash content and moisture of fractions, influencing the baseline emissions and the activity level of the project and the emissions as well as risks associated with the project were taken into account, as appropriate.

Data sources used for calculating emission reductions, such as invoices of diesel fuel and coal, measuring equipment (electric meters, scales) are clearly identified, reliable and transparent.

The following scales were used in the project:

The electronic strain-measuring car scales 40BA1P

| | |
|-----------------------|---|
| Data unit | t |
| Producer | LLC "Company "Vagovimiryuvalni system" |
| Type | The electronic car scales |
| Serial number | B-088 |
| Accuracy class | Medium (GOST 29329-92) |
| Calibration | 22/08/2011 |
| Calibration frequency | 1 year |
| Validity | SE «Luhanskstandartmetrologiya» |

The following electric meters were used for monitoring (2008-2012):

| Meter | Calibration frequency | Calibration |
|---------------------------|-----------------------|-----------------------|
| Electronic meter LZQJ-XC | 6 years | 01/03/2011 – till now |
| Electronic meter LZQJ-XC | 6 years | 01/03/2011- till now |
| Electronic meter LQE6803B | 6 years | 01/02/2010 - till now |

Emission factors, including default emission factors, are selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice. The calculation of emission reductions is based on conservative assumptions and the most plausible scenarios in a transparent manner.

3.5 Revision of monitoring plan (99-100)

Not applicable

3.6 Data management (101)

The data and their sources, provided in monitoring report, are clearly identified, reliable and transparent.

The implementation of data collection procedures is in accordance with the monitoring plan, including the quality control and quality assurance procedures. These procedures are mentioned in the section “References” of this report.

The function of the monitoring equipment, including its calibration status, is in order.

The evidence and records used for the monitoring are maintained in a traceable manner.

The data collection and management system for the project is in accordance with the monitoring plan:

The operational and management structure (as shown in below the figure) and the responsibilities of the principals are as follows. Ultimate responsibility for the project rests with the JI Project Manager.

The JI Project Manager is responsible for:

- Checking and signing off all project operational-related activities
- Appointing and liaising with the accredited independent entity (AIE)
- Identifying an audit team leader to be appointed by the Chief Engineer or a delegated authority
- Appointing a JI technical team to undertake the operational activities
- Organizing training and refresher courses
- Preparing and supervising a Health and Safety Plan for the JI technical team
- Supervising the work of the JI technical team
- Cross checking reported volumes and sales receipts

Internal Audit Department (Director)

The project owner - Small Private Commercial Production Company "SLAVUTICH" implemented provisions of this monitoring plan into its organizational and quality management structure. For monitoring, collection, registration, visualization, archiving, reporting of the monitored data and periodical checking of the measurement devices the management team headed by the Director of the company is responsible.

The monitoring staff is responsible for:

- Monitoring and recording of the relevant parameters

The operation and maintenance staff are responsible for:

- Operation and maintenance of the project infrastructure
- Service and maintenance equipment is performed by technical personnel beneficitation plant.

3.7 Verification regarding programmes of activities (102-110)

Not applicable

4 VERIFICATION OPINION

Bureau Veritas Certification has performed the second periodic verification of the «Waste Heap Dismantling in Sverdlovsk district of Luhansk Region of Ukraine with the Aim of Reducing Greenhouse Gases Emissions into the Atmosphere» Project in Ukraine, which applies JI specific approach. The verification was performed on the basis of UNFCCC criteria and host country criteria and also on the criteria given to provide for consistent project operations, monitoring and reporting.

The verification consisted of the following three phases: i) desk review of the monitoring report against the project design and the baseline and monitoring

plan; ii) follow-up interviews with project stakeholders; iii) resolution of outstanding issues and the issuance of the final verification report and opinion.

The management of Carbon Marketing and Trading Ltd. is responsible for the preparation of the GHG emissions data and the reported GHG emissions reductions of the project on the basis set out within the project Monitoring Plan indicated in the final PDD version. The development and maintenance of records and reporting procedures in accordance with that plan, including the calculation and determination of GHG emission reductions from the project, is the responsibility of the management of the project.

Bureau Veritas Certification verified the Project Monitoring Report version 02 for the reporting period as indicated below. Bureau Veritas Certification confirms that the project is implemented as planned and described in approved project design document. Installed equipment being essential for generating emission reduction runs reliably and is calibrated appropriately. The monitoring system is in place and the project is generating GHG emission reductions.

Bureau Veritas Certification can confirm that the GHG emission reduction is accurately calculated and is free of material errors, omissions, or misstatements. Our opinion relates to the project's GHG emissions and resulting GHG emissions reductions reported and related to the approved project baseline and monitoring, and its associated documents. Based on the information we have seen and evaluated, we confirm, with a reasonable level of assurance, the following statement:

Reporting period: From 01/07/2012 to 30/11/2012

| | | |
|---------------------|-----------|---------------------------|
| Baseline emissions | : 794266 | tonnes of CO2 equivalent. |
| Project emissions | : 1009 | tonnes of CO2 equivalent. |
| Leakage | : -215387 | tonnes of CO2 equivalent. |
| Emission Reductions | : 1008644 | tonnes of CO2 equivalent. |

| Compliance with monitoring plan | | | | |
| 94 | Did the monitoring occur in accordance with the monitoring plan included in the PDD regarding which the determination has been deemed final and is so listed on the UNFCCC JI website? | The monitoring occurred in accordance with the monitoring plan included in the PDD | OK | OK |
| 95 (a) | For calculating the emission reductions or enhancements of net removals, were key factors, e.g. those listed in 23 (b) (i)-(vii) above, influencing the baseline | For calculating the emission reductions key factors, e.g. those listed Section B.2 of the determined PDD version 2.0., as well as Section 3.4 of the present Verification Report, influencing | OK | OK |

VERIFICATION REPORT

| DVM Paragraph | Check Item | Initial finding | Draft Conclusion | Final Conclusion |
|---------------|--|---|------------------|------------------|
| | emissions or net removals and the activity level of the project and the emissions or removals as well as risks associated with the project taken into account, as appropriate? | the baseline emissions as well as risks associated with the project were taken into account, as appropriate. | | |
| 95 (b) | Are data sources used for calculating emission reductions or enhancements of net removals clearly identified, reliable and transparent? | <p>CL02 Please clarify how exactly has changed the correction factor for the uncertainty of waste heaps burning process.</p> <p>CL03 Please explain reasons why the amount of coal dismantled from the waste heaps within the MP is bigger than that in the PDD.</p> | CL02 CL03 | OK |
| 95 (c) | Are emission factors, including default emission factors, if used for calculating the emission reductions or enhancements of net removals, selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice? | Emission factors, including default emission factors, are selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice. They are provided in the CO2 emissions reduction calculation spreadsheet to the present MR as well as in Sections B.2.1. of the MR. | OK | OK |
| 95 (d) | Is the calculation of emission reductions or enhancements of net removals based on conservative assumptions and the most plausible scenarios in a transparent manner? | The calculation of emission reductions is based on conservative assumptions and the most plausible scenarios in a transparent manner | OK | OK |

Applicable to JI SSC projects only

VERIFICATION REPORT

| DVM Paragraph | Check Item | Initial finding | Draft Conclusion | Final Conclusion |
|---|---|-----------------|------------------|------------------|
| 96 | <p>Is the relevant threshold to be classified as JI SSC project not exceeded during the monitoring period on an annual average basis?</p> <p>If the threshold is exceeded, is the maximum emission reduction level estimated in the PDD for the JI SSC project or the bundle for the monitoring period determined?</p> | N/A | N/A | N/A |
| Applicable to bundled JI SSC projects only | | | | |
| 97 (a) | Has the composition of the bundle not changed from that is stated in F-JI-SSCBUNDLE? | N/A | N/A | N/A |
| 97 (b) | If the determination was conducted on the basis of an overall monitoring plan, have the project participants submitted a common monitoring report? | N/A | N/A | N/A |
| 98 | <p>If the monitoring is based on a monitoring plan that provides for overlapping monitoring periods, are the monitoring periods per component of the project clearly specified in the monitoring report?</p> <p>Do the monitoring periods not overlap with those for which verifications were already deemed final in the past?</p> | N/A | N/A | N/A |

VERIFICATION REPORT

| DVM Paragraph | Check Item | Initial finding | Draft Conclusion | Final Conclusion |
|---|---|---|------------------|------------------|
| Revision of monitoring plan | | | | |
| Applicable only if monitoring plan is revised by project participant | | | | |
| 99 (a) | Did the project participants provide an appropriate justification for the proposed revision? | During the time of the monitoring period under consideration no changes or revisions to the monitoring plan occurred. Monitoring procedure was carried out in accordance with the initial monitoring plan | OK | OK |
| 99 (b) | Does the proposed revision improve the accuracy and/or applicability of information collected compared to the original monitoring plan without changing conformity with the relevant rules and regulations for the establishment of monitoring plans? | N/A | N/A | N/A |
| Data management | | | | |
| 101 (a) | Is the implementation of data collection procedures in accordance with the monitoring plan, including the quality control and quality assurance procedures? | Yes, the implementation of data collection procedures is in accordance with the monitoring plan, including the quality control and quality assurance procedures. More over calibrations of measuring equipment are conducting taking into account national standards and procedures | OK | OK |
| 101 (b) | Is the function of the monitoring equipment, including its calibration status, in order? | Yes, the function of the monitoring equipment, including its calibration status, is in order. | OK | OK |
| 101 (c) | Are the evidence and records used for the monitoring maintained in a | Yes, all evidence and records are used for the monitoring maintained in a traceable manner | OK | OK |

VERIFICATION REPORT

|---------------|---|-----------------|------------------|------------------|
| | supporting documentation? | | | |
| 108 | Has the AIE made site inspections of at least the square root of the number of total JPAs, rounded to the upper whole number? If the AIE makes no site inspections or fewer site inspections than the square root of the number of total JPAs, rounded to the upper whole number, then does the AIE provide a reasonable explanation and justification? | N/A | N/A | N/A |
| 109 | Is the sampling plan available for submission to the secretariat for the JISC ex ante assessment? (Optional) | N/A | N/A | N/A |
| 110 | If the AIE learns of a fraudulently included JPA, a fraudulently monitored JPA or an inflated number of emission reductions claimed in a JI PoA, has the AIE informed the JISC of the fraud in writing? | N/A | N/A | N/A |

VERIFICATION REPORT

Table 2 Resolution of Corrective Action and Clarification Requests

| Draft report clarification and corrective action requests by verification team | Ref. to checklist question in table 1 | Summary of project participant response | Verification team conclusion |
|--|---------------------------------------|---|------------------------------|
| <p style="text-align: center;">CL01</p> <p>Please, clarify if some project equipment has not been working during monitoring period. Please specify this cases.</p> | 93 | During monitoring period there were no cases when some project equipment has not been working. | The issue is closed |
| <p style="text-align: center;">CAR01</p> <p>Please provide data on electricity consumed within the monitoring period.</p> | 93 | Data on electricity consumed within the monitoring period is provided to the verification team. | The issue is closed |
| <p style="text-align: center;">CAR02</p> <p>Please provide invoices on diesel consumed within the MP.</p> | 93 | The invoices on diesel consumed within the MP are provided to the verification team. | The issue is closed |
| <p style="text-align: center;">CAR03</p> <p>Please provide weighting acts on amount of coal dismantled form waste heap within the MP.</p> | 93 | The loading sheets with weight data are provided to the verification team. | The issue is closed |

VERIFICATION REPORT

| | | | |
|--|--------------|--|----------------------------|
| <p>CL02 Please clarify how exactly has changed the correction factor for the uncertainty of waste heaps burning process.</p> | <p>95(b)</p> | <p>The correction factor for the uncertainty of waste heaps burning process for this monitoring period is the same as last one where it was changed compared with PDD. The referred Report on the fire risk of Luhansk Region's waste heaps, conducted by Scientific Research Institute "Respirator" in 2012 is provided to the verification team in period of initial verification.</p> | <p>The issue is closed</p> |
|--|--------------|--|----------------------------|

VERIFICATION REPORT

| | | | |
|---|--------------|--|----------------------------|
| <p style="text-align: center;">CL03</p> <p>Please explain reasons why the amount of coal dismantled from the waste heaps within the MP is bigger than that within compared period in the PDD.</p> | <p>95(b)</p> | <p>Significant differences between the estimated volume of emission reductions in registered PDD is associated with using actual data including of average ash content and moisture of sorted fractions, which is extracted from waste heap, average ash content and moisture of coal, mined in Ukraine, in 2008-2012, also correction factor for the uncertainty of the waste heaps burning process has been changed according to the latest report of scientific research. In the PDD used estimated parameters, but such a parameter as the amount of coal dismantled from the waste heaps is difficult to forecast, because it depends on the coal demand in the market.</p> | <p>The issue is closed</p> |
