VERIFICATION REPORT

#### **1** INTRODUCTION

Climate Protection Bureau LLP has commissioned Bureau Veritas Certification to verify the emissions reductions of its JI project "Realisation of a complex of energy saving activities at the Ferrexpo Poltava Mining" (hereafter called "the project") at Komsomolsk city, Poltava Region, Ukraine.

This report summarizes the findings of the verification of the project, performed on the basis of UNFCCC criteria, as well as criteria given to provide for consistent project operations, monitoring and reporting.

#### 1.1 Objective

Verification is the periodic independent review and ex post determination by the Accredited Independent Entity of the monitored reductions in GHG emissions during defined verification period.

The objective of verification can be divided in Initial Verification and Periodic Verification.

UNFCCC criteria refer to Article 6 of the Kyoto Protocol, the JI rules and modalities and the subsequent decisions by the JI Supervisory Committee, as well as the host country criteria.

#### 1.2 Scope

The verification scope is defined as an independent and objective review of the project design document, the project's baseline study, monitoring plan and monitoring report, and other relevant documents. The information in these documents is reviewed against Kyoto Protocol requirements, UNFCCC rules and associated interpretations.

The verification is not meant to provide any consulting towards the Client. However, stated requests for clarifications, corrective and/or forward actions may provide input for improvement of the project monitoring towards reductions in the GHG emissions.

#### **1.3 Verification Team**

The verification team consists of the following personnel:

#### Kateryna Zinevych

Bureau Veritas Certification Team Leader, Climate Change Verifier

Vyacheslav Yeriomin

Bureau Veritas Certification Climate Change Verifier

This verification report was reviewed by:

Ivan Sokolov

Bureau Veritas Certification, Internal Technical Reviewer

#### 2 METHODOLOGY

The overall verification, from Contract Review to Verification Report & Opinion, was conducted using Bureau Veritas Certification internal procedures.

In order to ensure transparency, a verification protocol was customized for the project, according to the version 01 of the Joint Implementation Determination and Verification Manual, issued by the Joint Implementation Supervisory Committee at its 19 meeting on 04/12/2009. The protocol shows, in a transparent manner, criteria (requirements), means of verification and the results from verifying the identified criteria. The verification protocol serves the following purposes:

- It organizes, details and clarifies the requirements a JI project is expected to meet;
- It ensures a transparent verification process where the verifier will document how a particular requirement has been verified and the result of the verification.

The completed verification protocol is enclosed in Appendix A to this report.

#### 2.1 Review of Documents

The Monitoring Report (MR) submitted by Climate Protection Bureau LLP and additional background documents related to the project design and baseline, i.e. country Law, Project Design Document (PDD), and Guidance on criteria for baseline setting and monitoring, Host party criteria, Kyoto Protocol, Clarifications on Verification Requirements to be Checked by an Accredited Independent Entity were reviewed.

The verification findings presented in this report relate to the Monitoring Report versions 01, 02, and 03 and project as described in the determined PDD.

#### 2.2 Follow-up Interviews

On 27-29/09/2011 Bureau Veritas Certification performed on-site interviews with project stakeholders to confirm selected information and to resolve issues identified in the document review. Representatives of Climate Protection Bureau LLP and "Ferrexpo

VERIFICATION REPORT

Poltava Mining" were interviewed (see References). The main topics of the interviews are summarized in Table 1.

Table 1 Interview topi	CS
------------------------	----

Interviewed organization	Interview topics
"Ferrexpo Poltava Mining"	Organizational structure. Responsibilities and authorities. Training of personnel. Quality management procedures and technology. Implementation of equipment (records). Metering equipment control. Metering record keeping system, database.
Consultant: Climate Protection Bureau LLP	Baseline methodology. Monitoring plan. Monitoring report. Deviations from PDD.

## 2.3 Resolution of Clarification, Corrective and Forward Action Requests

The objective of this phase of the verification is to raise the requests for corrective actions and clarification and any other outstanding issues that needed to be clarified for Bureau Veritas Certification positive conclusion on the GHG emission reduction calculation.

If the Verification Team, in assessing the monitoring report and supporting documents, identifies issues that need to be corrected, clarified or improved with regard to the monitoring requirements, it should raise these issues and inform the project participants of these issues in the form of:

(a) Corrective action request (CAR), requesting the project participants to correct a mistake that is not in accordance with the monitoring plan;

(b) Clarification request (CL), requesting the project participants to provide additional information for the Verification Team to assess compliance with the monitoring plan;

(c) Forward action request (FAR), informing the project participants of an issue, relating to the monitoring that needs to be reviewed during the next verification period.

The Verification Team will make an objective assessment as to whether the actions taken by the project participants, if any,

VERIFICATION REPORT

satisfactorily resolve the issues raised, if any, and should conclude its findings of the verification.

To guarantee the transparency of the verification process, the concerns raised are documented in more detail in the verification protocol in Appendix A.

#### **3 VERIFICATION CONCLUSIONS**

In the following sections, the conclusions of the verification are stated.

The findings from the desk review of the original monitoring documents and the findings from interviews during the follow up visit are described in the Verification Protocol in Appendix A.

The Clarification, Corrective and Forward Action Requests are stated, where applicable, in the following sections and are further documented in the Verification Protocol in Appendix A. The verification of the Project resulted in 7 Corrective Action Requests and 2 Clarification Requests.

The number between brackets at the end of each section corresponds to the DVM paragraph.

### 3.1 Remaining issues and FARs from previous verifications

CAR 09 (absence of the Letters of Approval from both Parties) was raised during determination process. Please see Determination report UKRAINE-det/0354/2011 "Realization of a complex of energy saving activities at Ferrexpo Poltava Mining" dated 01/11/2011 issued by Bureau Veritas Certification.

Letters of Approval from the both Parties were received. The CAR is closed now.

#### 3.2 **Project approval by Parties involved (90-91)**

Written project approval by Great Britain Letter of Approval EA/CFCarbon/01/2012 dated 22/05/2012 has been issued by the DFP of that Party when submitting the first verification report to the secretariat for publication in accordance with paragraph 38 of the JI guidelines, at the latest.

Letter of Approval from Host Parties DFP from State Environmental Investment Agency of Ukraine #3600/23/7 was issued 13/12/2011.

The abovementioned written approval is unconditional.

VERIFICATION REPORT

Outstanding issues relevant to the project approval by the Parties involved are described in the Verification Protocol below (Tables 1 and 2). Please see CAR 1.

#### 3.3 **Project implementation (92-93)**

Project activity is aimed at improvement in power efficiency of the plant by the implementation of 3 subprojects.

Reduction of diesel fuel specific consumption during 1. *mining rock transportation* – aimed at the reduction in diesel fuel burnt by dump trucks which transport mining rock. Diesel fuel specific consumption reduction may be achieved due to the replacement of present heavy dump trucks by new dump trucks with more efficient engines. During the project activity it is planned to replace about 150 dump trucks. Reduction in fuel consumption during transportation of mining rock will result in reduction of greenhouse gas emissions. During the period of 2010 no dump trucks were replaced.

2. Modernization of iron ore concentrate production - aimed at establishing of high-efficient equipment and optimization of technological processes, which will allow reducing the consumption of electric energy during the production of iron ore concentrate. Reduction in electric energy consumption will allow to reduce energy consumption from UETG, which will result in decrease in fuel consumption for energy production and, correspondingly, reduction in greenhouse gas emissions at the power plants of Ukraine. Please find list of the implemented measures below:

Name of the phase

Name of the phase	Beginning of work	End of work
Modernization of iron ore co	ncentrate prod	uction
Implementation of the automatic control system of Barmac B-9100 crushers loading	12/03/2001	17/12/2010
A complex automation of crushed iron ore grinding sections #10-15 using ACS TP on the basis of Mitsubishi company equipment	20/09/2006	01/11/2014
Change in technology of industrial water supply to the concentrating mills #1 and #2	25/06/2008	31/03/2012
Reconstruction of crushed iron ore grinding sections #1-8 by the replacement of present MCЦ3.6*5.5 and MШP4*5 mills by	16/08/2008	20/03/2010

Table 1

VERIFICATION REPORT

МСЦ3.85*5.5 and МШР4.43*5.01 mills		
Establishment of thickeners on the pumping lines of the pulp from the pulp-pumping stations number 1 and number 2	01/07/2009	25/12/2016

3. *Modernization of pellets production* – the aim of modernization is the establishment of high-efficient equipment and optimization of technological processes, which will allow to reduce consumption in electric power and natural gas during the pellets production. Reduction in electricity consumption will allow to reduce its consumption from UETG leading to reduction in fuel consumption for the electric power production and. correspondingly, to the decrease in greenhouse emissions by power plants of Ukraine. Reduction in volumes of natural gas consumption during the pellets production will lead to decrease in greenhouse gas emissions. Please find list of the implemented measures below:

#### Table 2

Name of the phase	Beginning of work	End of work
Modernization of pelle	-	<u> </u>
Reconstruction of the seal of the tube furnaces ##1-4 unloading part by establishing the SUPERDEAL seal	09/01/2007	25/12/2014
Modernization of the tube furnaces ##1-4 fuel system by change of present gas burner into Unitherm Cemcon company (Austria) gas burner	05/08/2009	25/12/2013

As per the measures described above project was partly operational for the whole monitoring period of 2010.

At the same time project deviates from the one described in the determined PDD in the issues of the amount of the Emission Reduction Units. The ones stated in the PDD differ from the ERUs calculated in PDD. This difference is caused by the fact that in the

VERIFICATION REPORT

PDD calculation of ERUs was performed on the basis of the annual average value of natural gas in accordance with the monthly data provided by the natural gas supplier, and in the MR detailed calculation was performed on the basis of the monthly calculation of ERUs and in accordance with that monthly value of NCV was used according to the defined monitoring plan. Also the numeric value of carbon amount in natural gas was updated due to the publication of the updated version of "National inventory report of anthropogenic emissions by sources and removals by sinks of GHG's in Ukraine for 1990-2010" dated 13/04/2012 (hereinafter – "National Inventory Report of Ukraine"), which led to the difference in the AAUs amount.

Outstanding issues relevant to the project implementation are described in the Verification Protocol below (Tables 1 and 2). Please see CAR 02 and CL 01.

## 3.4 Compliance of the monitoring plan with the monitoring methodology (94-98)

The monitoring occurred in accordance with the revised monitoring plan included in the Monitoring Report version 03. Determination of the revision to the registered Monitoring Plan is presented below in the Section 3.5.

For calculating the emission reductions, key factors influencing the baseline emissions and the activity level of the project and the emissions as well as risks associated with the project were taken into account, as appropriate.

Data sources used for calculating emission reductions such as plant records, National Inventory of Ukraine, IPCC are clearly identified, reliable and transparent.

Emission factors, including default emission factors, are selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice.

The calculation of emission reductions is based on conservative assumptions and the most plausible scenarios in a transparent manner.

No outstanding issues relevant to the compliance of the monitoring plan with the monitoring methodology were raised.

#### 3.5 Revision of monitoring plan (99-100)

The project participants provided an appropriate justification for the proposed revision, which is natural gas net calorific value

VERIFICATION REPORT

determination. Determination of this parameter for emissions calculation is performed on the basis of monthly Certificates on natural gas quality physical and chemical characteristics, provided by gas supplier. For calculations provided in the PDD the average value of the given parameter was calculated for each year of reported monitoring period, calculations in the PDD were conducted with applying obtained average annual value. In monitoring plan calculation was done separately for each month of the monitoring period in accordance with chosen monitoring plan, as the result more precise data were received, that differ insignificantly from the estimated results provided in the PDD.

The proposed revision improves the accuracy and applicability of information collected compared to the original monitoring plan without changing conformity with the relevant rules and regulations for the establishment of monitoring plans.

Outstanding issues relevant to the revision of monitoring plan are described in the Verification Protocol below (Tables 1 and 2). Please see CL 02.

#### 3.6 Data management (101)

Key monitoring activities as for all three subprojects are:

- calculation of the vehicles freight turnover during mining rock transportation
- measurement of the quantity of diesel fuel combustion in mining rock transportation;
- calculation of iron ore concentrate amount produced;
- measurement of the quantity of electric energy consumption in the process of iron ore concentrate production;
- measurement of pellets amount produced;
- measurement of the quantity of electric energy consumption in the process of pellets production;
- measurement of the quantity of natural gas combustion in the process of pellets production;
- measurement of the natural gas net calorific value.

Measurement of the quantity of electric energy consumption in the process of iron ore concentrate production and measurement of the quantity of electric energy consumption in the process of pellets production is performed by the relevant electricity metering units.

Measurement of the quantity of natural gas combustion in the process of pellets production is taken by the gas metering units.

The calculation of the vehicles freight turnover during mining rock transportation is made according to results of measurement of the

VERIFICATION REPORT

mining rock transportation amount and transportation distance. The calculation results are registered in the "Report on materials consumption standard performance".

The measurement of the quantity of diesel fuel is made by the relevant measurement equipment and registered in the "Report on materials consumption standard performance ".

The calculation of the produced iron ore concentrate amount is made according to the "Instructions on compiling the average monthly goods turnover balance of the metal in the mining and iron ore processing processes". The calculation results are registered in the "Fact sheet on goods turnover ".

The measurement of the produced pellets amount is made by the relevant measurement equipment and registered in the "Fact sheet on goods turnover ".

The measurement of the natural gas net calorific value provided the natural gas supplier DC "Ukrtransgas" UMG "Cherkasytransgas" monthly. The natural gas net calorific value is given in "Certificate on natural gas quality physical and chemical characteristics ".

The data and their sources, provided in monitoring report, are clearly identified, reliable and transparent.

The results measuring and archiving are responsibility of the technical personnel. Technical personnel submit the results of measurements to the monitoring group for work coordination to estimate greenhouse gases emissions reduction. Estimation of emission reduction performing the developer of Joint implementation project. The functions of the monitoring group also include collection of non-measured data which are also subject to the monitoring. The monitoring group must make back-up copy of monitoring data which should be stored apart from the main data to avoid their loss in case of force majeure.

All information about monitoring and corrective measures must be archived for future verification of emissions reduction level. The head of the monitoring group is responsible for preparation and archiving of monitoring reports. The Chairman of the Board analyses general monitoring data and relevant documentation on periodic basis.

The implementation of data collection procedures is in accordance with the monitoring plan, including the quality control and quality assurance procedures. These procedures are mentioned in the section "References" of this report.

VERIFICATION REPORT

The function of the monitoring equipment, including its calibration status, is in order.

The evidence and records used for the monitoring are maintained in a traceable manner.

The data collection and management system for the project is in accordance with the revised monitoring plan.

The structure of the monitoring group, its functions and obligations identified by order of the General Director of Ferrexpo Poltava Mining #1350 dated 29/12/2003.

The General director of the Ferrexpo Poltava Mining appoints personnel responsible for operation and maintenance of technical equipment needed for the project. Their responsibilities also include registration of all data necessary for monitoring. The head of the monitoring group will be technical director-head of technical department of the Ferrexpo Poltava Mining. The monitoring will be conducted in close collaboration with technical personnel and will include the monitoring itself and also analysis and archiving of all data indicated in the previous section. The responsibilities of the monitoring group will also include work coordination to estimate emissions reduction level. Under the order of the Head of the monitoring group, estimation of emission reduction shall be performed by the developer of Joint implementation project. Periodic data on energy resources consumption will be compared with relevant registered data taken from the technical personnel to approve data credibility. In case of inconsistency of these data the cause of its appearance must be found in collaboration with the technical personnel. If the discrepancy of monitoring data is found, monitoring system of relevant data must be corrected.

The head of the monitoring group is responsible for preparation and archiving of monitoring reports. The General director analyses general monitoring data and relevant documentation on periodic basis.

Collection of operational monitoring data to be measured is covered by responsibilities of technical personnel. Technical personnel make registration of the measuring results in special operational logbooks. The head of monitoring group is responsible for monitoring data collection. Developer of the JI project collects monitoring data that are not to be measured, but are used to calculate emission reduction units. Technical personnel compose corresponding monthly operational reports on the basis of the summarized operational data; these reports are the main source for

VERIFICATION REPORT

emission reduction units calculation and monitoring reports composition. Copies of monthly operational reports are transferred to the monitoring group.

The monitoring data is kept during the whole crediting period and 2 year after the last charge of emission reduction unit.

Outstanding issues relevant to the data management plan are described in the Verification Protocol below (Tables 1 and 2). Please see CAR 03, 04, 05, 06, 07.

### 3.7 Verification regarding programmes of activities (102-110)

Not applicable.

#### **4 VERIFICATION OPINION**

Bureau Veritas Certification has performed 4<sup>th</sup> periodic verification of the "Realisation of a complex of energy saving activities at the Ferrexpo Poltava Mining" Project in Komsomolsk city, Poltava Region, Ukraine, which applies JI specific approach. The verification was performed on the basis of UNFCCC criteria and host country criteria and also on the criteria given to provide for consistent project operations, monitoring and reporting.

The verification consisted of the following three phases: i) desk review of the monitoring report against the project design and the baseline and monitoring plan; ii) follow-up interviews with project stakeholders; iii) resolution of outstanding issues and the issuance of the final verification report and opinion.

The management of name of the company is responsible for the preparation of the GHG emissions data and the reported GHG emissions reductions of the project on the basis set out within the project Monitoring Plan as per determined changes. The development and maintenance of records and reporting procedures in accordance with that plan, including the calculation and determination of GHG emission reductions from the project, is the responsibility of the management of the project.

Bureau Veritas Certification verified the Project Monitoring Report version 03 for the reporting period as indicated below. Bureau Veritas Certification confirms that the project is implemented as per determined changes (natural gas net calorific value determination, see Section 3.5 of this report). Installed equipment being essential for generating emission reduction runs reliably and is calibrated

VERIFICATION REPORT

appropriately. The monitoring system is in place and the project is generating GHG emission reductions.

Bureau Veritas Certification can confirm that the GHG emission reduction is accurately calculated and is free of material errors, omissions, or misstatements. Our opinion relates to the project's GHG emissions and resulting GHG emissions reductions reported and related to the approved project baseline and monitoring, and its associated documents. Based on the information we have seen and evaluated, we confirm, with a reasonable level of assurance, the following statement:

Reporting period: From 01/01/20	010 to 31/12/2	2010		
Baseline emissions	:2701290	tonnes	of	CO2
equivalent.				
Project emissions	:2107329	tonnes	of	CO2
equivalent.				
Emission Reductions	: 59396	1 tonnes	of	CO2
equivalent.				

Emission Reductions achieved during the monitoring period slightly differ from the ones assumed in the determined PDD version 07. Please see the table below:

Table 3

	PDD	MR
2010	592748	593961

First of all this difference is caused by the fact that in the PDD calculation of ERUs was performed on the basis of the annual average value of natural gas in accordance with the monthly data provided by the natural gas supplier, and in the MR detailed calculation was performed on the basis of the monthly calculation of ERUs and in accordance with that monthly value of NCV was used according to the defined monitoring plan. Also the numeric value of carbon amount in natural gas was updated due to the publication of the updated version of "National inventory report of anthropogenic emissions by sources and removals by sinks of GHG's in Ukraine for 1990-2010" dated 13/04/2012 (hereinafter – "National Inventory Report of Ukraine"), which led to the difference in the ERUs amount.

VERIFICATION REPORT

## Persons interviewed:

List persons interviewed during the verification or persons that contributed with other information that are not included in the documents listed above.

- /1/ Krasulya Oleksandr Sergiyovych Deputy Head of the Board on technical issues
- /2/ Kirnosov Oleksandr Oleksandrovych Head of the monitoring group, engineer of technical departement
- /3/ Tsymbal Volodymyr Andriyovych Chief energetic of Ferrexpo Poltava Mining
- /4/ Sennik Oleaksandr Vasylovych Chief environmental specialist
- /5/ Brynza Oleksandr Mykhaylovych Chief metrologist
- /6/ Zazymko Oleksandr Oleksandrovysh Chief engineer of technical department crushing-and-preparation workshop
- /7/ Kovalenko Kostyantyn Mykolayovysh Chief engineer of solid slurry household
- /8/ Paleha Serhiy Serhiyovych Chief technologist of pellets production workshop
- /9/ Lyashenko Mykola Ivanovych Deputy chief of mountainous transport workshop
- /10/ Lysenko Oleksandr Mykolayovych Deputy of the City Hall
- /11/ Breus Oleksandr Mykolayovych Deputy of the City Hall
- /12/ Khalabuzar Viktor Managing partner of Climate Protection Bureau LLP company

VERIFICATION REPORT

## VERIFICATION PROTOCOL

Check list for verification, according to the JOINT IMPLEMENTATION DETERMINATION AND VERIFICATION MANUAL (Version 01)

DVM Paragra ph	Check Item	Initial finding	Draft Conclusi on	Final Conclusi on
Project a	pprovals by Parties involved			
90	Has the DFPs of at least one Party involved, other than the host Party, issued a written project approval when submitting the first verification report to the secretariat for publication in accordance with paragraph 38 of the JI guidelines, at the latest?	written project approval by the Parties involved.	CAR 01	ОК
91	Are all the written project approvals by Parties involved unconditional?	Please refer to CAR 01 above.	-	ОК
Project in	mplementation			
92	Has the project been implemented in accordance with the PDD regarding which the determination has been deemed final and is so listed on the UNFCCC JI website?	accordance with the PDD regarding which the		ОК

DVM Paragra ph	Check Item	Initial finding	Draft Conclusi on	Final Conclusi on
		difference between emission reductions in MR and PDD for the respected period.		
93	What is the status of operation of the project during the monitoring period?	Project implementation has started in 2000, which means that during the monitoring period project has started its operation (as per Table 1 of the Monitoring Report version 01).	ОК	ОК
	ce with monitoring plan			
94	Did the monitoring occur in accordance with the monitoring plan included in the PDD regarding which the determination has been deemed final and is so listed on the UNFCCC JI website?	A.7. states "ERUs calculation in the PDD was made basing on the natural gas annual average net calorific value data provided to	CL 02	ОК
95 (a)	For calculating the emission reductions or enhancements of net removals, were key factors, e.g. those listed in 23 (b) (i)-(vii) above, influencing the baseline emissions or net removals and the activity level of the project and the emissions or removals as well as risks associated with the project taken into account, as appropriate?	Yes, for calculating the emission reductions key factors, e.g. those listed in 23 (b) (i)-(vii) above, influencing the baseline emissions or net removals and the activity level of the project and the emissions or removals as well as risks associated with the project were	ОК	ОК
95 (b)	Are data sources used for	The results measuring and archiving are responsibility of the technical personnel.	CAR 03	ОК

VERIFICATION REPORT

DVM Paragra ph	Check Item	Initial finding	Draft Conclusi on	Final Conclusi on
	enhancements of net removals clearly identified, reliable and transparent?	Technical personnel submit the results of measurements to the monitoring group for work coordination to estimate greenhouse gases emissions reduction. <b>CAR 03.</b> Please provide brief summary on the data sources (e.g. plant production reports, commercial reports etc).		
95 (c)	Are emission factors, including default emission factors, if used for calculating the emission reductions or enhancements of net removals, selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice?	Yes, all emission factors, including default emission factors, used for calculating the emission reductions, are selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice. <b>CAR 04.</b> Please specify all the data sources for the emission factors and other default values presented in the Table 5 section B.2.1., except for the ones that are calculated on the basis of the plant data.	CAR 04	ОК
95 (d)	Is the calculation of emission reductions or enhancements of net removals based on conservative assumptions and the most plausible scenarios in a transparent manner?	Yes, the calculation of emission reductions is based on conservative assumptions and the most plausible scenarios in a transparent manner.	ОК	ОК
Applicab 96	le to JI SSC projects only Is the relevant threshold to be classified as JI SSC project not exceeded during the monitoring period on an annual average basis? If the threshold is exceeded, is the	N/a	N/a	N/a

109	Is the sampling plan available for submission to the secretariat for the JISC ex ante assessment? (Optional)	N/a	N/a	N/a		
110	If the AIE learns of a fraudulently included JPA, a fraudulently monitored JPA or an inflated number of emission reductions claimed in a JI PoA, has the AIE informed the JISC of the fraud in writing?	N/a	N/a	N/a		

## Table 2 Resolution of Corrective Action and Clarification Requests

corrective action requests by verification team	Ref. to checkli st questio n in table 1	Summary of project participant response	Verification team conclusion
<b>CAR 01.</b> Please provide evidence of the written project approval by the Parties involved.	90	Letter of Approval from the Host Parties NFP was provided to AIE. Letter of Approval from the other parties NFP will be provided by the end of verification process.	Letter of Approval from British DFP was issued 22/05/2012. Issue is closed

VERIFICATION REPORT				B U R E A U V E R I T A S
<b>CL 01.</b> Please clarify the reason for the difference between emission reductions in MR and PDD for the respected period.		This difference is caused by the fact that in the PDD calculation of ERUs was performed on the basis of the annual average value of natural gas in accordance with the monthly data provided by the natural gas supplier, and in the MR detailed calculation was performed on the basis of the monthly calculation of ERUs and in accordance with that monthly value of NCV was used according to the defined monitoring plan.	Issue is closed.	
<b>CAR 02.</b> Please add the list of dump-trucks modernized during 2010.	92	Dump-trucks were not modernized during 2010.	lssue is closed.	

VERIFICATION REPORT				B U R E A U V E R I T A S
<b>CL 02.</b> Monitoring Report version 01 section A.7. states "ERUs calculation in the PDD was made basing on the natural gas annual average net calorific value data provided to the enterprise by the supplier", while according to the PDD version 07 this calculation was performed on the basis of monthly data. Please clarify.		On the basis of the monthly "Certificates of the physical- chemical data of natural gas quality", which are provided by the natural gas supplier, average value of this parameter was calculated for each monitoring period, calculation in PDD was performed using average annual value. In the MR calculation was performed separately for each month of the monitoring period in accordance to the chosen monitoring plan, which caused obtaining of the more accurate data that are slightly different that the ones presented in PDD. Corrected in the second version of the Monitoring report	Issue is closed.	
<b>CAR 03.</b> Please provide brief summary on the data sources (e.g. plant production reports, commercial reports etc).	95 (b)	Corrected in the second version of the Monitoring report	Issue is closed.	
<b>CAR 04.</b> Please specify all the data sources for the emission factors and other default values presented in the Table 5 section B.2.1., except for the ones that are calculated on the basis of the plant data.	95 (c)	Corrected in the second version of the Monitoring report	lssue is closed.	

VERIFICATION REPORT			B U R E A U V E R I T A S
<b>CAR 05.</b> Please briefly describe the data flow process.	101 (a)	Appropriate changes were provided to the MR version 02 section C.1.1	Issue is closed.
<b>CAR 06.</b> Please provide the passport with the calibration certificates for the theodolites, metal measuring reels and meters of oil products.		<ul> <li>D: Relevant documents were provided.</li> <li>KZ: Documents for the relevant monitoring period were not provided.</li> <li>D: All the documentation is provided.</li> </ul>	lssue is closed.
<b>CAR 07.</b> Please provide agreements with the third parties involved.	101 (b)	<ul> <li>D: Relevant documents were provided.</li> <li>KZ: Please add relevant information to the monitoring report (on the entities and persons, who perform calibration).</li> <li>D: Corrected in the third version of the Monitoring report.</li> </ul>	lssue is closed.
