

VERIFICATION REPORT CEP CARBON EMISSIONS PARTNERS S.A.

VERIFICATION OF THE JI PROJECT

IMPLEMENTATION OF THE ENERGY EFFICIENCY MEASURES
AND REDUCTION OF GREENHOUSE GAS EMISSIONS INTO THE
ATMOSPHERE AT STATE ENTERPRISE
“KRASNOARMEYSKUGOL”

First periodic

REPORT No. UKRAINE-VER/0749/2012

REVISION No. 02

for the period 01/01/2012 – 30/09/2012

BUREAU VERITAS CERTIFICATION

VERIFICATION REPORT

Date of first issue: 08/10/2012	Organizational unit: Bureau Veritas Certification Holding SAS
Client: CEP CARBON EMISSIONS PARTNERS S.A	Client ref.: Fabian Knodel

Summary:
 Bureau Veritas Certification has made the first periodic verification for the period from January 1, 2012 to September 30, 2012 of the "Implementation of the energy efficiency measures and reduction of greenhouse gas emissions into the atmosphere at State Enterprise "Krasnoarmeyskugol" project of CEP CARBON EMISSIONS PARTNERS S.A, located in Dymytriv and Rodynske towns, in Donetsk region, Ukraine, and applying JI specific approach, on the basis of UNFCCC criteria for the JI, as well as criteria given to provide for consistent project operations, monitoring and reporting. UNFCCC criteria (but for the crediting period) refer to Article 6 of the Kyoto Protocol, the JI rules and modalities and the subsequent decisions by the JI Supervisory Committee, as well as the host country criteria.
 The verification scope is defined as a periodic independent review and ex post determination by the Accredited Entity of the monitored reductions in GHG emissions during defined verification period, and consisted of the following three phases: i) desk review of the monitoring report against project design and the baseline and monitoring plan; ii) follow-up interviews with project stakeholders; iii) resolution of outstanding issues and the issuance of the final verification report and opinion. The overall verification, from Contract Review to Verification Report & Opinion, was conducted using Bureau Veritas Certification internal procedures.
 The first output of the verification process is a list of Clarification, Corrective Actions Requests, Forward Actions Requests (CR, CAR and FAR), presented in Appendix A.
 In summary, Bureau Veritas Certification confirms that the project is implemented as planned and described in approved project design documents. Installed equipment that is essential for generating emission reduction runs reliably and is calibrated appropriately. The monitoring system is in place and the project is generating GHG emission reductions. The GHG emission reduction is calculated without material errors and the ERUs issued totalize 186 276 tonnes of CO₂ equivalent for the monitoring period from 01/01/2012 to 30/09/2012 Calculation period.
 Our opinion relates to the project's GHG emissions and resulting GHG emission reductions reported and related to the approved project baseline and monitoring plan, and its associated documents.

1 INTRODUCTION

CEP CARBON EMISSIONS PARTNERS S.A has commissioned Bureau Veritas Certification to verify the emissions reductions of its JI project “Implementation of the energy efficiency measures and reduction of greenhouse gas emissions into the atmosphere at State Enterprise “Krasnoarmeyskugol” (hereafter called “the project”) located in Dymytriv and Rodynske towns, in Donetsk region, Ukraine.

This report summarizes the findings of the verification of the project, performed on the basis of UNFCCC criteria, as well as criteria given to provide for consistent project operations, monitoring and reporting.

The verification covers the period from January 1, 2012 to September 30, 2012.

1.1 Objective

Verification is the periodic independent review and ex post determination by the Accredited Independent Entity of the monitored reductions in GHG emissions during defined verification period.

The objective of verification can be divided in Initial Verification and Periodic Verification.

UNFCCC criteria refer to Article 6 of the Kyoto Protocol, the JI rules and modalities and the subsequent decisions by the JI Supervisory Committee, as well as the host country criteria.

1.2 Scope

The verification scope is defined as an independent and objective review of the project design document, the project’s baseline study, and monitoring plan, and monitoring report and other relevant documents. The information in these documents is reviewed against Kyoto Protocol requirements, UNFCCC rules and associated interpretations.

The verification is not meant to provide any consulting towards the Client. However, stated requests for clarifications, corrective and/or forward actions may provide input for improvement of the project monitoring towards reductions in the GHG emissions.

1.3 Verification Team

The verification team consists of the following personnel:

Vyacheslav Yeriomin
Bureau Veritas Certification Team Leader, Climate Change Verifier

Vasiliy Kobzar
Bureau Veritas Certification Technical Specialist

This determination report was reviewed by:
Ivan Sokolov
Bureau Veritas Certification Internal Technical Reviewer

Victoria Legka
Bureau Veritas Certification Technical Specialist

2 METHODOLOGY

The overall verification, from Contract Review to Verification Report & Opinion, was conducted using Bureau Veritas Certification internal procedures.

In order to ensure transparency, a verification protocol was customized for the project, according to the version 01 of the Joint Implementation Determination and Verification Manual, issued by the Joint Implementation Supervisory Committee at its 19 meeting on 04/12/2009. The protocol shows, in a transparent manner, criteria (requirements), means of verification and the results from verifying the identified criteria. The verification protocol serves the following purposes:

- It organizes, details and clarifies the requirements a JI project is expected to meet;
- It ensures a transparent verification process where the verifier will document how a particular requirement has been verified and the result of the verification.

The completed verification protocol is enclosed in Appendix A to this report.

2.1 Review of Documents

The Monitoring Report (MR) submitted by CEP CARBON EMISSIONS PARTNERS S.A and additional background documents related to the project design and baseline, i.e. country Law, Project Design Document (PDD), Approved CDM methodology, Determination Report of the project issued by Bureau Veritas Certification Holding SAS No. UKRAINE-

det/0603/2012 as of 20/08/2012, Guidance on criteria for baseline setting and monitoring, Host party criteria, the Kyoto Protocol, Clarifications on Verification Requirements to be Checked by an Accredited Independent Entity were reviewed.

The verification findings presented in this report relate to the Monitoring Report for the period from 01/01/2012 to 30/09/2012 version 01 of October 05, 2012 and version 02 of October 09, 2012 and the project as described in the determined PDD.

2.2 Follow-up Interviews

On 08/10/2012 Bureau Veritas Certification verification team conducted a visit to the project site (SE “Krasnoarmeyskugol”) and performed (on-site) interviews with project stakeholders to confirm selected information and to resolve issues identified in the document review. Representatives of CEP CARBON EMISSIONS PARTNERS S.A and SE “Krasnoarmeyskugol” were interviewed (see References). The main topics of the interviews are summarized in Table 1.

Table 1 Interview topics

Interviewed organization	Interview topics
SE “Krasnoarmeyskugol”	<ul style="list-style-type: none"> ➤ Organizational structure ➤ Responsibilities and authorities ➤ Roles and responsibilities relating to data collection and processing ➤ Equipment installation ➤ Data logging archiving and reporting ➤ Metering equipment control ➤ Metering record keeping system, database ➤ IT management ➤ Personnel training ➤ Quality control procedures and technology ➤ Internal audit and inspections
Consultant: CEP CARBON EMISSIONS PARTNERS S.A	<ul style="list-style-type: none"> ➤ Baseline methodology ➤ Monitoring plan ➤ Monitoring report ➤ Deviations from the PDD

2.3 Resolution of Clarification, Corrective and Forward Action Requests

The objective of this phase of the verification is to raise the requests for corrective actions and clarification and any other outstanding issues that

needed to be clarified for Bureau Veritas Certification positive conclusion on the GHG emission reduction calculation.

If the Verification Team, in assessing the monitoring report and supporting documents, identifies issues that need to be corrected, clarified or improved with regard to the monitoring requirements, it should raise these issues and inform the project participants of these issues in the form of:

- (a) Corrective action request (CAR), requesting the project participants to correct a mistake that is not in accordance with the monitoring plan;
- (b) Clarification request (CL), requesting the project participants to provide additional information for the Verification Team to assess compliance with the monitoring plan
- (c) Forward action request (FAR), informing the project participants of an issue, relating to the monitoring that needs to be reviewed during the next verification period.

The Verification Team will make an objective assessment as to whether the actions taken by the project participants, if any, satisfactorily resolve the issues raised, if any, and should conclude its findings of the verification.

To guarantee the transparency of the verification process, the concerns raised are documented in more detail in the verification protocol in Appendix A.

3 VERIFICATION CONCLUSIONS

In the following sections, the conclusions of the verification are stated.

The findings from the desk review of the original monitoring documents and the findings from interviews during the follow up visit are described in the Verification Protocol in Appendix A.

The Clarification, Corrective and Forward Action Requests are stated, where applicable, in the following sections and are further documented in the Verification Protocol in Appendix A. The verification of the Project resulted in 6 Corrective Action Requests and 3 Clarification Requests.

The number between brackets at the end of each section corresponds to the DVM paragraph.

3.1 Remaining issues and FARs from previous verifications

There aren't any CLs, CARs and FARs from previous verifications.

3.2 Project approval by Parties involved (90-91)

The project was approved by the host Party (Ukraine) - the Letter of Approval No. 2892/23/7 dated 04/10/2012 issued by the State Environmental Investment Agency of Ukraine. The project was also approved by the party – buyer of the emission reduction units (Switzerland) - Letter of Approval No.J294-0485 dated 24/08/2012 issued by the Federal Office for the Environment FOEN of Switzerland.

The abovementioned written approvals are unconditional.

The identified areas of concern as to the project approval by the parties involved, project participants responses and Bureau Veritas Certification's conclusions are described in Appendix A to this report (refer to CAR 01, CAR 02).

3.3 Project implementation (92-93)

The purpose of the project is greenhouse gas emission reduction by waste heap extinction at SE "Krasnoarmeyskugol". The project provides for implementation of innovative technologies of waste heap extinction. The Project that was initiated by SE "Krasnoarmeyskugol" will result in the reduction of greenhouse gas emissions into the atmosphere and will improve the environmental situation in the region.

In June 2007 in accordance with the results of temperature survey the waste heap No.1(Rodynska Mine) and in september 2007 No.3(Dymyrov Mine) was considered as the one which are burning. After that the development of the project aimed at the stabilization of waste heap has started. In November 2007 all the actions directed on stabilization and quenching of waste heap were undertaken.

Status of the project activity implementation complies with the project plan included in the determined PDD version 02.

Thus, temperature surveys of the waste heap were conducted permanently; as a result, the waste heap was declared non-burning.

The starting date of the crediting period has not changed and remains the date when the first emission reductions are expected to be generated, namely: January 1, 2008.

The monitoring system is in place.

Monitoring equipment, such as general purpose thermometer, meets industry standards of Ukraine. All monitoring equipment is included in the detailed verification (calibration) plan and tested at intervals prescribed by the manufacturers of such equipment.

The identified areas of concern as to the project implementation, project participants responses and Bureau Veritas Certification's conclusions are described in Appendix A to this report (refer to CL 01).

3.4 Compliance of the monitoring plan with the monitoring methodology (94-98)

The monitoring occurred in accordance with the monitoring plan included in the PDD regarding which the determination has been deemed final and is so listed on the UNFCCC JI website.

For calculating the emission reductions, key factors influencing the baseline emissions and the activity level of the project and the emissions as well as risks associated with the project were taken into account, as appropriate.

Data sources used for calculating emission reductions are clearly identified, reliable and transparent.

Emission factors, including default emission factors, are selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice.

The calculation of emission reductions is based on conservative assumptions and the most plausible scenarios in a transparent manner.

The monitoring periods per component of the project are clearly specified in the monitoring report and do not overlap with those for which verifications were already deemed final in the past.

The identified areas of concern as to the compliance of the monitoring plan with the monitoring methodology, project participants responses and Bureau Veritas Certification's conclusions are described in Appendix A to this report (refer to CAR 03 - CAR 05).

3.5 Revision of monitoring plan (99-100)

Not applicable.

3.6 Data management (101)

The data and their sources, provided in monitoring report, are clearly identified, reliable and transparent.

The implementation of data collection procedures is in accordance with the monitoring plan provided in the PDD, including the quality control and quality assurance procedures.

The function of the monitoring equipment, including its calibration status, is in order.

According to the current Law “On metrology and metrological activity”, all metering equipment in Ukraine shall meet the specified requirements of relevant standards and is subject to periodic calibration. Intercalibration periods are stated in Section B.1. of the MR.

The project complies with the legislative requirements relating to calibration and verification.

The evidence and records used for the monitoring are maintained in a traceable manner.

Data collection and management system is in accordance with the monitoring plan provided in the PDD.

Structure of data collection as a part of the project monitoring is shown in Figure 1.

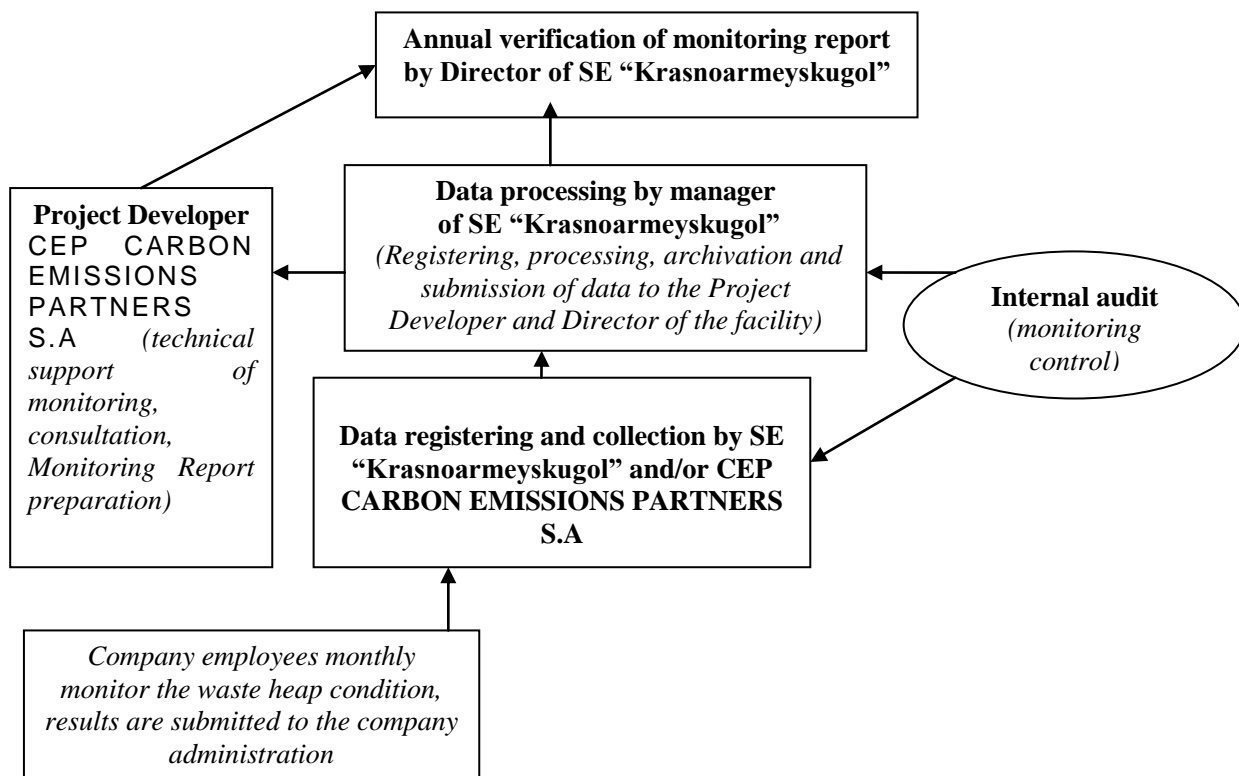

Figure 1 Structure of monitoring data collection

All necessary data concerning GHG emission reduction monitoring is archived in paper and/or electronic form and kept till the end of the crediting period and for two years after the latest transaction with emission reduction units.

The Monitoring Report version 02 provides sufficient information on duties assigned, responsibility and authorities concerning implementation and undertaking of monitoring procedures, including data management. The verification team confirms the efficiency of the existing management and operational systems and considers them appropriate for reliable project monitoring.

The identified areas of concern as to the data management, project participants responses and Bureau Veritas Certification's conclusions are described in Appendix A to this report (refer to CAR 06, CL 02, CL 03).

3.7 Verification regarding programmes of activities (102-110)

Not applicable.

4 VERIFICATION OPINION

Bureau Veritas Certification has performed the first periodic verification for the period from January 1, 2012 to September 30, 2012 of the “Implementation of the energy efficiency measures and reduction of greenhouse gas emissions into the atmosphere at State Enterprise “Krasnoarmeyskugol” project in Ukraine, which applies JI specific approach. The verification was performed on the basis of UNFCCC criteria and host country criteria and also on the criteria given to provide for consistent project operations, monitoring and reporting.

The verification consisted of the following three phases: i) desk review of the monitoring report against the project design and the baseline and monitoring plan; ii) follow-up interviews with project stakeholders; iii) resolution of outstanding issues and the issuance of the final verification report and opinion.

SE “Krasnoarmeyskugol” management is responsible for the preparation of data which serve as the basis for estimation of GHG emission reductions. CEP CARBON EMISSIONS PARTNERS S.A. provides SE “Krasnoarmeyskugol” with consultative support in the issues relating to organization of data collection and is responsible for developing the monitoring report based on the Project Monitoring Plan included in the final PDD version 02.

Bureau Veritas Certification verified the Project Monitoring Report version 02 for the reporting period from 01/01/2012 to 30/09/2012 as indicated below. Bureau Veritas Certification confirms that the project is implemented as per approved PDD version. Installed equipment being essential for generating emission reduction runs reliably and is calibrated appropriately. The monitoring system is in place and the project is generating GHG emission reductions.

Emission reductions achieved by the project for the period from 01/01/2012 to 30/09/2012 do not differ significantly from the amount predicted for the same period in the determined PDD. Emission reductions predicted in the determined PDD version 02 and actual emission reductions stated in the MR version 02 are provided in Table 3 of this report.

Table 3 Emission reductions predicted in the determined PDD version 02 and actual emission reductions stated in the MR version 02

Period	Estimated GHG emission reductions stated in the determined PDD in tonnes of CO ₂ eq	Ex-post GHG emission reductions stated in the Monitoring report in tonnes of CO ₂ eq
01/01/2012-	198 694	186 276

VERIFICATION REPORT

30/09/2012		
Total	198 694	186 276

At the time of PDD development available data on the quantitative characteristics of the waste heaps of 2006 (OP "Mine" Dimitrov " and OP" Mine "Rodinsky") were taken to calculate the amount of GHG emission reductions. At the stage of monitoring the actual data on the characteristics of the waste heap of 2008 were used in calculations. This explains the difference between the amount of GHG emission reductions specified in the registered PDD (version 02) and actually reached values of GHG emission reductions provided in this monitoring report.

Conservative approach on volume of waste heaps used in the PDD is used in this monitoring report. Because in calculation of GHG emission reductions after 2008 data on the quantitative characteristics of the waste heaps of 2008 were used, although there was a shipment of rock after 2008, because waste heaps are active .

Bureau Veritas Certification can confirm that the GHG emission reduction is calculated without material misstatements. Our opinion relates to the project's GHG emissions and resulting GHG emissions reductions reported and related to the approved project baseline and monitoring, and its associated documents. Based on the information we have seen and evaluated, we confirm the following statement:

Total in the period from 01/01/2012 to 30/09/2012

Baseline emissions equivalent.	:	186 276	tonnes	of	CO2
Project emissions	:	0 tonnes	of CO2 equivalent.		
Emission Reductions equivalent.	:	186 276	tonnes	of	CO2

APPENDIX A: PROJECT VERIFICATION PROTOCOL

BUREAU VERITAS CERTIFICATION HOLDING SAS

VERIFICATION PROTOCOL

Table 1. Check list for verification, according to the JOINT IMPLEMENTATION DETERMINATION AND VERIFICATION MANUAL (Version 01)

DVM Paragraph	Check Item	Initial finding	Draft Conclusion	Final Conclusion
Project approvals by Parties involved				
90	Has the DFPs of at least one Party involved, other than the host Party, issued a written project approval when submitting the first verification report to the secretariat for publication in accordance with paragraph 38 of the JI guidelines, at the latest?	The project has been approved by both the Host party (Ukraine) and the other Party involved (Switzerland). The Letters of Approval were issued by NFPs of the Parties involved. Two Letters of Approval were available at the beginning of the first verification of the project. CAR 01. Please, provide detailed information on the Letters of Approval (LoA) issued by the parties involved in the monitoring report. CAR 02. Please, state the data relating to determination stage of the project in Section A.2. of the MR.	CAR 01 CAR 02	OK OK
91	Are all the written project approvals by Parties involved unconditional?	Yes, all the written project approvals by Parties involved are unconditional.	OK	OK
Project implementation				
92	Has the project been implemented in	CL 01. Please, explain the difference between	CL 01	OK

VERIFICATION REPORT

DVM Paragraph	Check Item	Initial finding	Draft Conclusion	Final Conclusion
	accordance with the PDD regarding which the determination has been deemed final and is so listed on the UNFCCC JI website?	emission reductions achieved in the monitoring period of 01/01/2012-30/09/2012 and stated in the MR and the values of emission reductions estimated in the PDD version 02 for the same period.		
93	What is the status of operation of the project during the monitoring period?	Implementation of the project activities started in late 2007, as stated in the determined PDD version 02. However, emission reductions achieved in 2007 are conservatively excluded from the calculation. Thus, 01/01/2012 is the starting date of the crediting period. Project implementation status and project milestones in the reporting period of 01/01/2012 – 30/09/2012 are provided in Section A.6. of the MR version 02.	OK	OK
Compliance with monitoring plan				
94	Did the monitoring occur in accordance with the monitoring plan included in the PDD regarding which the determination has been deemed final and is so listed on the UNFCCC JI website?	There aren't any changes in or deviations from the registered PDD.	OK	OK
95 (a)	For calculating the emission reductions or enhancements of net removals, were key factors, e.g. those listed in 23 (b) (i)-(vii) of the DVM, influencing the baseline emissions or net removals and the activity level of the project and the emissions or removals as well as risks associated with the project taken into account, as appropriate?	Yes, all relevant key factors were taken into account, as appropriate.	OK	OK

VERIFICATION REPORT

DVM Paragraph	Check Item	Initial finding	Draft Conclusion	Final Conclusion
95 (b)	Are data sources used for calculating emission reductions or enhancements of net removals clearly identified, reliable and transparent?	Data sources used for calculating emission reductions or enhancements of net removals are clearly identified, reliable and transparent. CAR 03. The national inventory report of anthropogenic greenhouse gas emissions by sources and removals by sinks in Ukraine for 1990-2009 is stated as the data source for parameters in Tables 3 and 4 of the MR. But the Inventory for 1990-2010 shall be used. CAR 04. Please, state the frequency of monitoring for parameter $EF_{p,C,coal}^y$ in table 3 of the MR.	CAR 03 CAR 04	OK OK
95 (c)	Are emission factors, including default emission factors, if used for calculating the emission reductions or enhancements of net removals, selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice?	Yes, emission factors, including default emission factors, that are used for calculating the emission reductions or enhancements of net removals, are selected by carefully balancing accuracy and reasonableness, and appropriately justified of the choice. CAR 05. It is stated that a detailed calculation and the data source of reduced GHG emission factor for natural gas transportation to end consumers are provided in Annex 4. But there isn't any Annex 4.	CAR 05	OK
95 (d)	Is the calculation of emission reductions or enhancements of net removals based on conservative assumptions and the most plausible scenarios in a transparent manner?	Calculation of emission reductions is based on conservative assumptions and the most plausible scenarios in a transparent manner.	OK	OK
Applicable to JI SSC projects only				

VERIFICATION REPORT

DVM Paragraph	Check Item	Initial finding	Draft Conclusion	Final Conclusion
96	Is the relevant threshold to be classified as JI SSC project not exceeded during the monitoring period on an annual average basis? If the threshold is exceeded, is the maximum emission reduction level estimated in the PDD for the JI SSC project or the bundle for the monitoring period determined?	Not applicable	Not applicable	Not applicable
Applicable to bundled JI SSC projects only				
97 (a)	Has the composition of the bundle not changed from that is stated in F-JI-SSCBUNDLE?	Not applicable	Not applicable	Not applicable
97 (b)	If the determination was conducted on the basis of an overall monitoring plan, have the project participants submitted a common monitoring report?	Not applicable	Not applicable	Not applicable
98	If the monitoring is based on a monitoring plan that provides for overlapping monitoring periods, are the monitoring periods per component of the project clearly specified in the monitoring report? 103	Does the verification ensure the accuracy and conservativeness of the emission reductions or enhancements of removals generated by each JPA?	Not applicable	Not applicable	Not applicable
104	Does the monitoring period not overlap with previous monitoring periods?	Not applicable	Not applicable	Not applicable
105	If the AIE learns of an erroneously included JPA, has the AIE informed the JISC of its findings in writing?	Not applicable	Not applicable	Not applicable
Applicable to sample-based approach only				

VERIFICATION REPORT

DVM Paragraph	Check Item	Initial finding	Draft Conclusion	Final Conclusion
106	<p>Does the sampling plan prepared by the AIE:</p> <p>(a) Describe its sample selection, taking into account that:</p> <p>(i) For each verification that uses a sample-based approach, the sample selection shall be sufficiently representative of the JPAs in the JI PoA such extrapolation to all JPAs identified for that verification is reasonable, taking into account differences among the characteristics of JPAs, such as:</p> <ul style="list-style-type: none"> - The types of JPAs; - The complexity of the applicable technologies and/or measures used; - The geographical location of each JPA; - The amounts of expected emission reductions of the JPAs being verified; - The number of JPAs for which emission reductions are being verified; - The length of monitoring periods of the JPAs being verified; and - The samples selected for prior verifications, if any? 	Not applicable	Not applicable	Not applicable

VERIFICATION REPORT

DVM Paragraph	Check Item	Initial finding	Draft Conclusion	Final Conclusion
107	Is the sampling plan ready for publication through the secretariat along with the verification report and supporting documentation?	Not applicable	Not applicable	Not applicable
108	Has the AIE made site inspections of at least the square root of the number of total JPAs, rounded to the upper whole number? If the AIE makes no site inspections or fewer site inspections than the square root of the number of total JPAs, rounded to the upper whole number, then does the AIE provide a reasonable explanation and justification?	Not applicable	Not applicable	Not applicable
109	Is the sampling plan available for submission to the secretariat for the JISC's ex ante assessment? (Optional)	Not applicable	Not applicable	Not applicable
110	If the AIE learns of a fraudulently included JPA, a fraudulently monitored JPA or an inflated number of emission reductions claimed in a JI PoA, has the AIE informed the JISC of the fraud in writing?	Not applicable	Not applicable	Not applicable

**Table 2. Resolution of Corrective Action and Clarification Requests**

Draft report clarifications and corrective action requests by verification team	Ref. to checklist question in table 1	Summary of project participant response	Verification team conclusion
CAR 01. Please, provide detailed information on the Letters of Approval (LoA) issued by the parties involved in the monitoring report.	90	The project was approved by the host Party (Ukraine) - the Letter of Approval No. 2892/23/7 dated 04/10/2012 issued by the State Environmental Investment Agency of Ukraine. The project was also approved by the party – buyer of the emission reduction units (Switzerland) - Letter of Approval No.J294-0485 dated 24/08/2012 issued by the Federal Office for the Environment FOEN of Switzerland.	CAR 01 is closed as necessary corrections were made in the MR version 02.
CAR 02. Please, state the data relating to determination stage of the project in Section A.2. of the MR.	90	The Joint Implementation Project “Implementation of the energy efficiency measures and reduction of greenhouse gas emissions into the atmosphere at State Enterprise “Krasnoarmeyskugol” was determined by Bureau Veritas Certification, Determination Report No. UKRAINE-DET/0603/2012 dated 20/08/2012.	CAR 02 is closed as necessary corrections were made in the MR version 02.

VERIFICATION REPORT

<p>CAR 03. The national inventory report of anthropogenic greenhouse gas emissions by sources and removals by sinks in Ukraine for 1990-2009 is stated as the data source for parameters in Tables 3 and 4 of the MR. But the Inventory for 1990-2010 shall be used.</p>	95(b)	<p>The national inventory report of anthropogenic greenhouse gas emissions by sources and removals by sinks in Ukraine for 1990-2010 was used to determine certain parameters. Refer to the MR version 02.</p>	<p>CAR 03 is closed as necessary corrections were made.</p>
<p>CAR 04. Please, state the frequency of monitoring for parameter $EF_{p,C,coal}^y$ in table 3 of the MR.</p>	95(b)	<p>The frequency of monitoring for parameter $EF_{p,C,coal}^y$ - Annually. Refer to the MR version 02.</p>	<p>CAR 04 is closed as necessary corrections were made.</p>
<p>CAR 05. It is stated that a detailed calculation and the data source of reduced GHG emission factor for natural gas transportation to end consumers are provided in Annex 4. But there isn't any Annex 4.</p>	95 (c)	<p>Detailed calculation and the data source of reduced GHG emission factor for natural gas transportation to end consumers are provided in Annex 2. Calculation of GHG emission reductions under the project "Implementation of the energy efficiency measures and reduction of greenhouse gas emissions into the atmosphere at State Enterprise "Krasnoarmeyskugol"</p>	<p>CAR 05 is closed as necessary corrections were made.</p>
<p>CAR 06. Please, provide information on storage of monitoring data of the project.</p>	101 (a)	<p>Information necessary for monitoring of GHG emission reductions is stored at in paper and electronic forms and will be stored by the end of the</p>	<p>CAR 06 is closed as necessary corrections were made.</p>

VERIFICATION REPORT

		crediting period for two years after the transfer of emission reduction units generated by the project.	
CL 01. Please, explain the difference between emission reductions achieved in the monitoring period of 01/01/2012-30/09/2012 and stated in the MR and the values of emission reductions estimated in the PDD version 02 for the same period.	95 (b)	At the time of PDD development available data on the quantitative characteristics of the waste heaps of 2006 (OP "Mine" Dimitrov " and OP" Mine "Rodinsky") were taken to calculate the amount of GHG emission reductions. At the stage of monitoring the actual data on the characteristics of the waste heap of 2008 were used in calculations. This explains the difference between the amount of GHG emission reductions specified in the registered PDD (version 02) and actually reached values of GHG emission reductions provided in this monitoring report.	CL 01 was closed as the clarification was provided.
CL 02. Provide a reference to the State Standard of Ukraine DSTU 2708:2006 "Metrology. Calibration of measuring instruments. The organization and procedure" in Section B.1.2.	95 (b)	Relevant reference was provided in the MR version 02.	CL 02 is closed as necessary reference was provided.

VERIFICATION REPORT

CL 03. Please, check the numbering of Tables and Figures in the MR.	101 (d)	Relevant corrections were made in the MR version 02.	CL 03 is closed as necessary changes were made.
