

Joint Implementation Roundtable

Revision of the JI guidelines

Wrap-up session III

Validation, Verification and issuance processes

Langer Eugen

Bonn Germany, 9 August 2012

Break-out session III: Validation, verification and issuance processes

Main issues discussed:

- Paragraphs in Sections G - Validation considered one by one.
- Most paragraphs in Section H – Verification and issuance processes considered.
- Level of specification and understanding of certain terms a common theme – e.g. host Party approval, publicly available documentation.
- Several issues noted for consideration by JISC.
- Edits to improve the draft identified.

Break-out session III: Validation, verification and issuance processes

Proposals and questions for JISC:

- **Host Party approval** – what does it include (e.g. standardized baselines), when is it required (before or after validation), is it consistent? Does it need to be regulated through the M&P?
- **Accreditation of IE** – should not be elaborated in M&P
- **PDD made publicly available** – what version of the PDD and how to set minimum quality requirements, what about supporting documents?
- **Timelines and milestones** - include in M&P or a supporting best practice guideline?
- **Lower ERU issuance** – Should not be project-specific but based on a sector and made publicly available by the host Party.

Implement a number of edits to the document.

29 – restrict content to role of AIE. Move requirements for who accredits elsewhere (para 44 and 45).

32 – clarify that deadline should take into account time to address issues.

40 – move regulation of lower ERU issuance elsewhere in the document.

42 – describe how first issuance will be done.
