

SUBMISSION BY Samir TANTAWI (EGYPT)
on
UNFCCC Technical Workshop on Joint Implementation

As participant to the previous technical workshop (13-14 Feb. 07, Bonn) I realize that such technical workshops provide an opportunity for interaction between the Focal Points of Designated National Authorities and Joint Implementation Supervisory Committee (JISC), as well as different relevant entities and stakeholders.

UNFCCC technical workshops on joint implementation improve exchanging experiences and improving the understanding of different technical issues in Joint Implementation Mechanism as well as its relation with Clean Development Mechanism

Moreover, the technical workshops facilitate, promote and anticipate the implementation of projects under Article 6 of the Kyoto Protocol based on relevant countries experiences

The expected objectives of the upcoming workshop could be:

- Identify successful case studies that can be followed from the implementation of the Clean Development Mechanism (CDM).
- Compromise approval procedures for both CDM and JI projects
- Benefit from the experience of Executive Board of CDM (EB-CDM) in managing, evaluating and certificating CDM projects in JI projects
- Exchange views on the rules established for operating projects under Article 6 of the Kyoto Protocol
- Share information on setting up national institutional infrastructure and supportive environments Share experience on the development of projects from technical and financial point of view

I appreciate this opportunity to present my views.

Samir TANTAWI; (M.Sc.)
Climate Change Specialist-Climate Change Unit
Member of Egyptian Bureau for CDM (EB-CDM)
Egyptian Environmental Affairs Agency (EEAA)
