JI post 2012 – Issues to Consider PoA as an Opportunity for JI

Angelika Smuda

Administrative Procedures, Quality Control,

JI (DFP) / CDM (DNA)

German Emissions Trading Authority (DEHSt)

Federal Environment Agency (UBA)

UNFCCC Technical Workshop on Joint Implementation

Bonn, 10th September 2008, Bonn

Outline

1. Relevance of JI Post-2012
2. JI-PoA Pilot Projects in Germany
3. Potential for PoA within JI

Relevance of JI Post-2012

- Currently future of JI is eclipsed by discussions about CDM
- CDM Projects could graduate to JI Projects under Sectoral Approaches – Additionality is not as problematic as under the CDM
- In current Annex I Countries within the European Union there is a large untapped potential in the non-ETS-Sector
- In Economies in Transition there is a large potential, that will not be used due to the current small window for JI
- As is true for CDM we should not throw away the institutions established and the knowledge gained during the first commitment period

JI-PoA Projects in Germany (I)

- German Emissions Trading Authority (DEHSt) has approved two PoA projects and endorsed three and there are several in the pipeline
- We use the same documents that were prepared for CDM-PoA:
 - Separate Documents for PoA and CPA
 - Proof of Additionality for both PoA and an exemplary CPA
- Deviations from the CDM-Rules:
 - Combination of different Methodologies
 - Starting Date of CPA after receiving Letter of Endorsement, at the earliest on 1st January 2008
 - No proof of additionality for every single CPA

JI-PoA Projects in Germany (II)

- „Pilot Programmatic Joint Implementation Project in North Rhine-Westfalia (JIM.NRW)“
 - Energy Efficiency Measures in small and middle sized companies not included within the EU-ETS
 - Replacement or enhancement of steam or heating boilers with or without fuel switch
 - We allowed a combination of methodologies that would not be possible under the CDM

JI-PoA Projects in Germany (III)

- „RWE Climate Bonus Heatpumps Programme“
 - Incentive for private home owners to replace their heating system with an electric heat pump before the technical lifetime of the old boiler expires or they are obligated to replace it by law.
 - Programme is to complement public funding by the German promotional bank “Kreditanstalt für Wiederaufbau – KfW”
 - Electricity Provider might be able to reach more households

Potential for PoA within JI

- Large Potential for PoA especially in Ukraine and Russia
 - Insulation of Buildings
 - Transport
 - Energy Efficiency in Small and Medium Companies
-
- PoAs are currently the best means to transform economies on a large scale by addressing small discrete sources
 - We would ask the JI Supervisory Committee to offer guidelines for PoA!
