

JISC improvements: developer's view

UNFCCC technical workshop on joint implementation,
Kiev, Ukraine,
8-9 September 2009

Korobova Nina
Global Carbon Rus LLC

Developer concerns and cares:

1. **JI service quality**
2. **Timing**
3. **Client administration cost**
4. **Track 2 being too close to CDM**

JI service quality

- **No possibility to read preliminary determined PDD to learn lessons;**
- **Track 1 projects available at UNFCCC site presented in the different formats, languages, not comparable at all;**
- **Communication with JISC is only via AIE that is ineffective.**

Timing

- It is not possible to know in advance the opinion of experts assessing PDD before JISC session (to be aware of potential review);
- Determination time from the contracting to the issue of final report is long, not regulated by JISC, though could be one of criteria for overall performance assessment.

Client's Administration cost

1. **Withdrawal fine is rather high and should be at the level for the small scale project threshold (i.e. ERU 15 thousand charged either 01. US cent or 0.2 US cent);**
2. **The procedure of paying back the money above the not returned amount is not specified.**

Track 2 being too close to CDM

- **CDM Additionality tool is the key document;**
- **Determinators do not feel comfortable about JI specific approach as it requires creativity and more deep knowledge;**
- **Following CDM methodologies step by step is preferable though they are based on cases not similar to the JI countries reality;**
- **New Determination and verification manual is 90% CDM VVM.**

Leading full JI service provider in Russia
